UNITED STATES PATENT OFFICE.

ALEXANDER F. YOUNG AND JOSEPH F. FOOTE, OF MYSTIC BRIDGE, CONN.

IMPROVEMENT IN LAMP-BRACKETS.

Specification forming part of Letters Patent No. 132,785, dated November 5, 1872.

To all whom it may concern:

Be it known that we, ALEXANDER F. YOUNG and JOSEPH F. FOOTE, of Mystic Bridge, in the county of New London and State of Connecticut, have invented certain Improvements in Lamp Brackets or Stands, of which the following is a specification:

The object of our invention is to have for the use of performers on musical instruments, and others, a lamp bracket or stand, which can be adjusted so as to place the light in a desired position, and so constructed as to allow, when not in use, of its being folded and inclosed in the instrument or drawer to which it may be attached, and yet retain the bracket in its place. These movements are accomplished by the application and use of a hinge-joint and pivot-joint, as shown in the drawing.

Figure 1, side elevation of the instrument or drawer A, showing the bracket in position for

use; Fig. 2, side elevation of the instrument or drawer A, with the bracket folded and lid closed; Fig. 3, interior end view of the instrument or drawer A, with the bracket-arm raised to show the plate E; Fig. 4, the curved arm C, to which the shelf B is to be fastened; G, the continuation of the arm C, detached at the hinge D; F, the pivot; E, the plate with socket for reception of pivot F, and by which the bracket is secured to the case A.

We claim as our improvement—

In lamp-brackets, the arrangement of the curved arm C, stand B, pivot and socket G, F, and D, in combination with box A, as shown and described.

ALEXANDER F. YOUNG.

JOSEPH F. FOOTE.
