UNITED STATES PATENT OFFICE.

FRANK W. WRIGHT, OF WICHITA, KANSAS.

COMBINED UNDERSHIRT AND SUSPENSORY BANDAGE.

SPECIFICATION forming part of Letters Patent No. 657,582, dated September 11, 1900.

Application filed September 28, 1899. Serial No. 731,996. (No model.)

To all whom it may concern:

Be it known that I, FRANK W. WRIGHT, a citizen of the United States of America, residing at Wichita, in the county of Sedgwick and State of Kansas, have invented certain new and useful Improvements in a Suspensory and Undershirt Combined, of which the following is a specification, reference being had therein to the accompanying drawings, and the figures of reference thereon, forming a part of this specification, in which—

Figure 1 is a front view of my improved suspensory and undershirt combined. Fig. 2 is a detail view showing the pocket or sack from the inside.

This invention relates to certain improvements in combined suspensories and undershirts; and it consists of a pocket or sack made integral with or secured to the bottom of an undershirt; and the object of my invention is to make, in combination with an undershirt, a suspensory consisting of a pocket or sack for carrying the scrotum.

Referring to the drawings, 1 represents an undershirt. 2 represents a pocket or sack secured to or made integral with the bottom of the front of an undershirt on the inside. 3 represents a draw-string passing through the top edge of said pocket with the ends on the outside of the shirt. 4 represents an open-

ing in the shirt immediately above the top of said pocket. After the scrotum is placed in said sack the draw-string is gathered up and tied, and the opening 4 above said sack is for the purpose of obviating the necessity of removing the scrotum from said sack except when said shirt is removed.

Having thus described my invention, what I claim as new and useful, and desire to secure by Letters Patent, is as follows:

1. As a new article of manufacture an undershirt having an opening in the front part thereof a short distance from the bottom, a sack permanently secured at the bottom and sides to the inside, in front and near the bottom of said shirt, and under said opening.

2. A new article of manufacture consisting of an undershirt having an opening in the front thereof a short distance from the bottom, a sack permanently secured at the bottom and sides to the inside, in front and near the bottom of said shirt, a draw-string passing through the upper end of said sack and through said shirt, substantially as shown and described.

FRANK W. WRIGHT.
