UNITED STATES PATENT OFFICE.

ZEBINA M. HIBBARD, OF FREEPORT, ILLINOIS.

IMPROVEMENT IN IRONING-TABLES.

Specification forming part of Letters Patent No. **175,459**, dated March 28, 1876; application filed January 22, 1876.

To all whom it may concern:

Be it known that I, ZEBINA M. HIBBARD, of Freeport, in the county of Stephenson, and in the State of Illinois, have invented certain new and useful Improvements in Ironing-Tables; and do hereby declare that the following is a full, clear, and exact description thereof, reference being had to the accompanying drawings, and to the letters of reference marked thereon, making a part of this specification.

The nature of my invention consists in the construction and arrangement of an ironing-board with suitable supports, and connected to a table by a shouldered bar and cam-lever, as will be hereinafter more particularly set forth.

In the accompanying drawings, making part of this specification, Figure 1 represents a perspective view of the ironing-board and sleeve-board connected and arranged upon a table. Fig. 2 is a perspective of the ironing-board and sleeve-board connected and secured to a wall. Fig. 3 is a bottom view of the under side of the ironing-board, and Fig. 4 a view of the legs which support one end of the board.

In the drawings, A represents the ironing-board, which is made in the usual shape, and which is provided at one end with two metallic bars, *o*, upon its upper side. At right angles to and projecting above these bars at their outer ends are two pins, *ee*. In Fig. 2, J represents a plate made of metal, which is secured to the wall, and which is provided with two eyes, into which the pins *ee* take for the purpose of securing the board to the wall. C represents the legs which support the under side of the board at any suitable point. G repre-

sents the sleeve-board. This board G is made of suitable size for slipping over it the sleeves of any kind of garments to be ironed, and it is hinged at one end to the ironing-board in such a manner that it can be raised up out of the way at any time it may be desirable. *g* represents the legs, which are secured to the under side of the sleeve-board, for supporting it beyond its hinge.

When it is desirable to secure the ironing-table to a common table, I use a pronged metallic bar, *a*, which is provided with eyes, which fit over the pins *ee*. This bar has a shoulder at *x*, which fits upon the upper side of the table, while it has connected to it below said shoulder a cam-lever, which works in such a manner as to clamp the table-top between itself and the shoulder at *x*. In Fig. 3, which represents the under side of the ironing-board, D represents a stationary short support, which is used upon an ordinary table, while H H represent two half-hinges, which fit the corresponding halves upon the legs C, which said legs are used to support the board when it is connected to a wall.

Having thus fully described my invention, what I claim as new, and desire to secure by Letters Patent, is—

The ironing-board A, provided with suitable supports, and connected to the table B by means of the bar *a*, with its shoulder and cam-lever, as and for the purpose set forth.

In testimony that I claim the foregoing I have hereunto set my hand this 18th day of December, 1875.

ZEBINA M. HIBBARD.
