(54) **Method for displaying operational information of loom**

(57) A loom stores stoppage information including a step number each time the loom stops due to a weaving failure during a weaving operation, and displays an aggregation result on a display device (4) as operational information in response to a display request. The aggregation result is obtained by aggregating the stoppage

information stored in a period before the time of issuance of the display request. The number of stoppages of the loom is aggregated for each of the step numbers to obtain aggregation results for the respective step numbers, and the aggregation results are displayed on the display device (4) in association with the respective step numbers.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 08 01 6401

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
