⑤4 Lamp package with internally projecting tab member.

(57) A paperboard container for a pair of electric incandescent lamps (15, 17) which is in the form of a parallelepiped and includes as part thereof or secured thereto a tab member (23) which projects within the container to engage and effectively separate the lamps contained therein. The tab member (23) in one embodiment is cut from one of the container's side walls (D) and simply depressed prior to insertion of the lamps within opposing open ends of the container. The ends are then closed, providing a finished package which is both relatively easy and inexpensive to manufacture.
