(54) Title: LOCATION INFORMATION IN PRESENCE

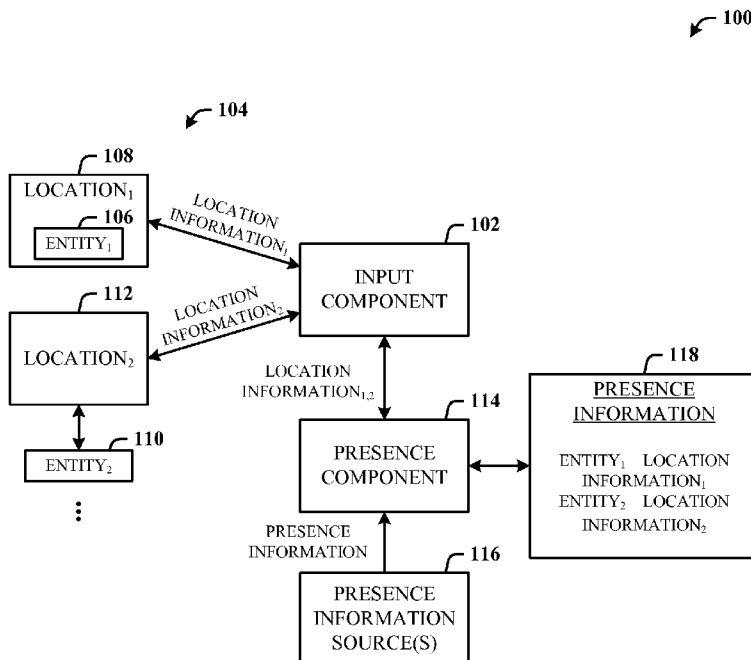

FIG. 1

(57) Abstract: Architecture that facilitates the combining and presentation of location information in a communications system. The location information can be virtual location information published from a location source and/or associated location systems to a presence system. The presence system then makes the virtual location information available to end users as participants to a conferencing session, for example, or as invites to the session. The location information and/or the presence information can be made active (e.g., a hyperlink) such that when selected as presented to a user, automatically joins the user to the session.
