(54) Title: STABLE ANTIBODY FORMULATIONS

ABX-EGF PF000619 pH Stability Study SEC

(57) Abstract: The invention provides a formulation including an acetic acid buffer, a glutamic acid buffer or a succinic acid buffer with a pH from about 4.5-7.0, at least one excipient comprising a sugar or a polyol and an effective amount of a therapeutic antibody. The buffer can include a salt of acetate, glutamate or succinate and the sugar or polyol can include glycerol, sucrose, trehalose or sorbitol. The therapeutic antibody can include a human antibody, a humanized antibody, a chimeric antibody, or a functional fragment thereof.

* Special categories of cited documents:

- *A* document defining the general state of the art which is not considered to be of particular relevance
- *E* earlier document but published on or after the international filing date
- *L* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- *O* document referring to an oral disclosure, use, exhibition or other means
- *P* document published prior to the international filing date but later than the priority date claimed

- *T* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- *X* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- *Y* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
- *G* document member of the same patent family
