(54) **Novel stationery.**

(57) The present invention describes novel adhesive stationery having at least one adhesive coated member releasably attached, by its adhesive coated surface, to a release member. Separation lines variously arranged in either or both the release member and the adhesive coated member allow a portion of the adhesive coated member to be detached for attach-

ment elsewhere and for removal of part of the release member which allows the thus uncovered surface of the adhesive member to be attached to another part of the novel stationery thus forming a loop. The novel adhesive stationery of the present invention can be used for example as luggage labels.
