No. 33,180.

L. F. FERRELL.

SHOE LACE FASTENER.

(Application filed July 20, 1900.)

Patented Sept. 11, 1900.
UNITED STATES PATENT OFFICE.

LENA F. FERRELL, OF LA MONTE, MISSOURI.

DESIGN FOR A SHOE-LACE FASTENER.

SPECIFICATION forming part of Design No. 33,180, dated September 11, 1900.

To all whom it may concern:

Be it known that I, LENA F. FERRELL, a citizen of the United States, residing at La Monte, in the county of Pettis and State of Missouri, have invented and produced a new and original Design for a Shoe-Lace Fastener, of which the following is a specification.

This invention relates to a design for a shoe-lace fastener, and the leading feature consists in the design forming the subject-matter of the accompanying illustration.

The drawing represents a perspective view of a shoe-lace fastener embodying the features of the design.

The design is characterized by the main body portion 1, which is of diamond shape, with two transversely-aligned centrally-disposed apertures 2. From the opposite ends of the body continuous members 3 extend inwardly and merge into regularly-curved bends 4, and continuous with the latter are outwardly-extending reduced tongues 5, having a concave contour and located over the said members 3 and project beyond the emanating points of the latter.

Having thus described the invention, what is claimed is new.

The design for a shoe-lace fastener, herein shown and described.

In testimony that I claim the foregoing as my own I have hereto affixed my signature in the presence of two witnesses.

LENA F. FERRELL.

Witnesses:

WILL W. FERRELL,
BERTHA FERRELL.
