UNITED STATES PATENT OFFICE.

ANSON TOTTINGHAM, OF PITTSFIELD, MASSACHUSETTS.

IMPROVEMENT IN CAMP-LOUNGES.

Specification forming part of Letters Patent No. **177,771**, dated May 23, 1876; application filed March 6, 1876.

To all whom it may concern:

Be it known that I, ANSON TOTTINGHAM, of Pittsfield, Berkshire county, Massachusetts, have invented a new and Improved Camp-Lounge, of which the following is a specification:

My invention consists of a "knock-down" frame, with a canvas web stretched from head to foot, over bars of different heights, to elevate the head for a pillow, and buckling around cross-bars by two straps attached to the canvas for fastening it, making a very simple and cheap portable camp-lounge.

Figure 1 is a longitudinal sectional elevation of my improved portable camp-lounge, the section being taken on line *x x*, Fig. 2.

A is the head-frame, B the foot-frame, and C the side rails, which go together detachably, and fasten by the braces D, and hook-braces E. F is the canvas, which has two

straps, G, at each end, with buckles. It is stretched over the top bars I of the head and foot frames, and buckled around the lower bars K to fasten it.

The greater height of the head-frame gives the inclination required for the head, and this can be varied by taking up or letting out the straps. These straps also serve for binding up the lounge for carrying about.

Having thus described my invention, I claim as new and desire to secure by Letters Patent—

The combination of the canvas F, having straps G at the ends, with the knock-down frame, having cross-bars I and K, to the head and foot frames, substantially as specified.

ANSON TOTTINGHAM.
