## UNITED STATES PATENT OFFICE.

HENRY W. EASTMAN, OF BALTIMORE, MARYLAND.

## IMPROVEMENT IN TOY WAGONS.

Specification forming part of Letters Patent No. 125,126, dated April 2, 1872.

*To all whom it may concern:*

Be it known that I, HENRY W. EASTMAN, of the city and county of Baltimore, State of Maryland, have invented a new and Improved "Folding Wagon;" and do hereby declare that the following is a full, clear, and exact description of the construction and operation of the same, reference being had to the annexed drawing making part of this specification, in which my invention is represented by a perspective view.

The object of my invention is to make a toy wagon, so constructed that it will fold into a small package for economy of room.

In the drawing, A represents the bottom of the wagon-box; B B, the two folding sides; C C, the wheels, attached to the sides by screws, so as to fold down, as represented in Fig. 1. D D represent the head-board and tail-board, which slide in grooves, represented by E, in the ends of the sides B. The sides B

are hinged by metal hinges to the bottom A, as represented by F, thus when open making a substantial box or wagon-body. I propose, if found necessary for strength, to use metal trunnions and bolts, as shown in Figs. 4 and 5, the trunnions G being secured to the sides B, and the wheels C revolving on the screw-bolt H, shown in Fig. 4.

Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is—

The folding wagon above described, consisting substantially of the bottom piece A, hinged sides B, wheels C, end pieces D, hinges F, and trunnions G, the whole operating together in the manner and for the purposes specified.

HENRY W. EASTMAN.
