(54) **Draft excluder particularly for reinforced doors**

(57) A draft excluder, particularly for reinforced doors, including a fixed profile with a substantially U-shaped transverse cross-section, which can be accommodated in a recess formed at the lower edge of a door, a movable profile provided with a sealing means and at least partially inserted within the fixed profile, to which it

is functionally connected by an automatic movement means, which allows it to pass from a raised position to a lowered position during the closure of the door. An adjustable retention means is associated with the fixed profile in order to allow its anchoring inside the recess, protruding laterally from the fixed profile on interchangeable sides.
