(54) Ink jet type head assembly

(57) In an ink jet type head assembly, a plurality of elongate ejection electrodes (6) are formed on a base. An ink chamber (7) has an opening (12) facing one end of the ejection electrodes, and stores liquid ink containing charged toner particles on the base. One end of each ejection electrode is positioned on the base. An ink meniscus (11) is formed between the end of the base where the above end of the ejection electrode is

positioned and the opening of the ink chamber. An opposite electrode (2) faces the ends of the ejection electrodes with the intermediary of a recording medium (13). The base (15) is inclined about its end toward the ink chamber by a preselected angle with respect to a plane perpendicular to the lengthwise direction of the opposite electrode.
