(54) Title: A SYSTEM AND USER INTERFACE SUPPORTING TASK SCHEDULE CONFIGURATION

(57) Abstract: In an embodiment of the present inventions, a work flow process (10) may be generated by decomposing functions of a clinical information system into discrete tasks including an individual task associated with a first pre-configured executable procedure (50) for implementing the individual task and associating a user selectable image element (350) with the pre-configured first executable procedure (50) used in implementing the individual task. In a currently envisioned embodiment, integratable work flow processes according to the present invention may be provided to a vertical application system (60). It is emphasized that this abstract is provided to comply with the rules requiring an abstract which will allow a searcher or other reader to quickly ascertain the subject matter of the technical disclosure. It is submitted with the understanding that it will not be used to interpret or limit the scope of meaning of the claims.
