John Wagner

UNITED STATES PATENT OFFICE.

JOHN WAGNER, OF LANCASTER COUNTY, PENNSYLVANIA.

IMPROVEMENT IN WAGON-JACKS.

Specification forming part of Letters Patent No. 115,396, dated May 30, 1871.

I, JOHN WAGNER, of Lancaster county and State of Pennsylvania, have invented certain Improvements in Lifting-Jacks, of which the following is a specification:

The nature of my invention consists in applying to one leg of the lifting-jack an adjustable bearing-block.

In the drawing, Figure 1 shows my jack in two positions, the full-lined figure showing it with the lever-arm A raised, B and C being the legs, to which A is pivoted at *a*, *b* and D being the adjustable bearing-block, open or solid, and which is suspended by means of a link, *d*, to the leg C, which link may rest in any of the notches *e*; D being arranged at any suitable height just under the body to be raised, the lever A is pressed downward in

the direction of the arrow, when the jack takes the position shown in dotted outline.

Fig. 2 is a partial top view of my device, *f* representing a strengthening-plate on the other side than that of the front view, shown in Fig. 1.

Having thus described my invention, what I claim as new, and desire to secure by Letters Patent of the United States, is—

The resting-block D, through which the adjustable link *d* passes, in combination with legs B C and lever A, arranged and operating as shown and described.

JOHN WAGNER.
