(54) Title: METHOD AND APPARATUS FOR PROVIDING PROJECTED USER INTERFACES ON VARIOUS SURFACES

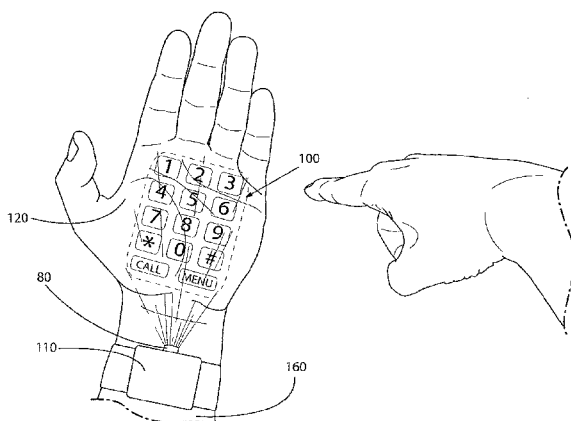

FIG. 3

(57) Abstract: An apparatus, method, and computer program product are provided for generating a projected user interface. The apparatus may include at least one processor and at least one memory including computer program code. The at least one memory and the computer program code may be configured, with the processor, to cause the apparatus to receive information regarding a detected position of the users body and to determine whether the detected position is an activation position, in which case the projection of a user interface may be provided. The user interface may be projected on an area on the users body, such as a hand or a forearm, or on the surface of an object. The activation position may thus be a predefined position of the users body in which effective projection of the user interface onto the surface and user interaction with the user interface is facilitated.
