(54) Title: SESSION AND MEDIA BINDING TO COMMON CONTROL

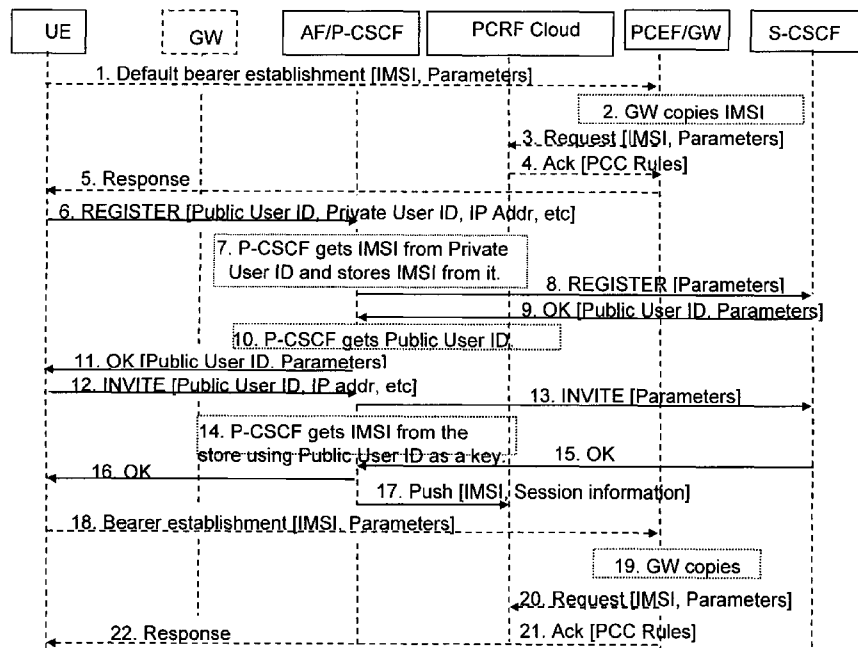

Fig. 6

(57) Abstract: There are provided a method and structural means for session and media binding to a common control, in particular to a common policy control. The method may basically comprise extracting a user identification parameter from a private user identity during session registration, retrieving the user identification parameter in accordance with a public user identity during session handling, obtaining a corresponding user identification parameter during bearer handling, and establishing a binding for policy-controlled sessions of the user to a policy control entity on the basis of the user identification parameter.
