Abstract: Each of multiple radio devices in a region (e.g., a zone) receives time reference information for synchronizing themselves amongst each other. For example, based on the timing reference information, each radio device in a region synchronizes itself with respect to a common time reference, enabling communications according to shared access schedule (e.g., a time slotted access schedule). Each of the radio devices schedules communications to one or more target devices (e.g., RFID tags) in a monitored region based at least in part according to the shared access schedule. For example, each of multiple transmitters of the tag readers are assigned one or more time slots of the shared access schedule in which they are permitted to communicate in the monitored region.
Declaration under Rule 4.17:

INTERNATIONAL SEARCH REPORT

PCT/US07/13676

A. CLASSIFICATION OF SUBJECT MATTER

IPC: H04J 306/2006

USPC: 370/350

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
U.S.: 370/350

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)

EAST, eDan

### INTERNATIONAL SEARCH REPORT

**Observations where certain claims were found unsearchable** (Continuation of item 2 of first sheet)

This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. **☐** Claims Nos.:
   - because they relate to subject matter not required to be searched by this Authority, namely:

2. **☑** Claims Nos.:
   - because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:

3. **☐** Claims Nos.:
   - because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

### Observations where unity of invention is lacking** (Continuation of item 3 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

Please See Continuation Sheet

1. **☐** As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
2. **☒** As all searchable claims could be searched without effort justifying additional fees, this Authority did not invite payment of any additional fees.
3. **☐** As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:

4. **☐** No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

**Remark on Protest**
1. **☐** The additional search fees were accompanied by the applicant's protest and, where applicable, the payment of a protest fee.
2. **☒** The additional search fees were accompanied by the applicant's protest but the applicable protest fee was not paid within the time limit specified in the invitation.
3. **☐** No protest accompanied the payment of additional search fees.
BOX III. OBSERVATIONS WHERE UNITY OF INVENTION IS LACKING

Group I, claim(s) 1-28, 62-89, and 123, drawn to a method and computer system for scheduling and monitoring communications from wireless transceiver device with plurality of wireless identification tags in a monitored region.

Group II, claim(s) 29-61, 90-122, 124-126, drawn to a plurality of methods and systems that specifically synchronizes RFID tag reader with other RFID tag readers, and receiving transmitter information associated with multiple transducers and distributing the antenna assignment information to provide notification of multiple time slots for multiple transducers for transmission.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: group I pertains to the scheduling communications from wireless transceiver device with plurality of wireless identification tags classified in US 455/464 or IPC H04Q 7/20 and group II pertains to more of specific RFID readers and their synchronization classified in US 370/350 or IPC H04J 3/06.
