(54) Title: MULTIDIMENSIONAL INFORMATION VISUALIZATION USING ATTRIBUTE RODS

(57) Abstract: A system for browsing multidimensional information includes a digital data storage circuit (48) that stores the multidimensional information in a database and a digital logic circuit (44) that imports, manipulates and outputs the multidimensional information in the database in accordance with a mapping model maps each dimension of multidimensional information space to a location in abstract physical space, and a user interface (70) interactively accepts input from a user and, using the mapping model, renders a graphical representation (78) of the multidimensional information space. The graphical representation (78) is responsive to input of user-initiated restrictions on the multidimensional information space by effecting corresponding visible manifestations in the graphical representation (78).
