N. PETERS, PHOTO-LITHOGRAPHER, WASHINGTON, D. C.

UNITED STATES PATENT OFFICE.

MARTIN BISHOP, OF WASHINGTON, DISTRICT OF COLUMBIA.

IMPROVED COMBINATION OF FUEL-BOX AND WASHING APPARATUS WITH SETTEES.

Specification forming part of Letters Patent No. **35,210**, dated May 13, 1862.

To all whom it may concern:

Be it known that I, MARTIN BISHOP, of Washington city, in the District of Columbia, late of Lafayette, Indiana, have invented a new and Improved Mode of Constructing a Combined Settee, Fuel-Repository, and Wash-stand; and I do hereby declare that the following is a full and exact description thereof, reference being had to the accompanying drawing, making part of this specification, and being a perspective view of my invention.

To enable others skilled in the art to make and use my invention, I will proceed to describe its construction and operation.

I construct my settee in any of the usual forms, but add a front part, bottom, and back, so as to enable me to divide the length of the box thus formed into different compartments for the reception of different kinds of fuel, and one part for the wash-stand, to wit:

Letter A on the drawing represents the front of the settee.

Letter B shows a compartment at the right-hand end for coal, lined inside with zinc or any other sheet metal; also an aperture and gate, *a*, through which coal can be taken with a small fire-shovel.

Letter C shows a compartment for wood, kindlings, &c.

Letter D shows a compartment for a wash-stand, &c.

The seat F to the settee forms the lid to cover these different compartments by being hung with hinges, in whole or in parts, to the back side.

Having thus described my invention, I claim as new and desire to secure by Letters Patent—

As a new article of manufacture, a combined settee, fuel-repository, and wash-stand, constructed and arranged as herein drawn and described.

MARTIN BISHOP.
