Filed June 22, 1967, Ser. No. 648,027

5 Claims. (Cl. 296-47)

ABSTRACT OF THE DISCLOSURE

A kit containing a magnet, metal plate, screws and adhesive tape.

Summary of the invention

My kit is provided with a container having a removable lid. The container has two flat recesses which are relatively shallow separated by a compartment which is relatively deep.

The plate and the magnet (which is a bar magnet) are separately disposed in corresponding recesses. The magnet has holes accommodating the screws. The screws and tape are disposed in the compartment.

This kit can be used in the home, in storage areas such as basements, in automobiles and camping as well as many other uses. The magnet can be secured by tape to an article or surface either as a weight or for holding other articles or items. The magnet can also be secured by the screws to a wood surface or can be secured by magnetic attraction to a suitable magnetic article or surface. The metal plate is magnetic and can be disposed on one side of an article with the magnet on the other side whereby the magnet attracts the plate and the article is held sandwiched in between.

Brief description of the drawings

In the drawings:

FIG. 1 is a perspective view of the kit showing one arrangement of the articles;

FIG. 2 is a view of the container partially open and exposing the interior thereof showing a different arrangement of the articles;

FIG. 3 is a view of the tape partially unrolled;

FIG. 4 is a perspective view of the magnet; and

FIG. 5 is a perspective view of the plate.

Detailed description of preferred embodiments

Referring now to FIGS. 1-5, there is shown a hollow

2

plastic container 10 with a removable lid 12. Lid 12 is transparent and exposes the contents of the container.

The container shown in FIGURE 2 has two relatively shallow recesses 14 separated by a relatively deep compartment 16. A flat steel plate 18 is removably disposed in one recess; a flat bar magnet 20 having countersunk transverse holes 22 is disposed removably in the other recess. Screws 24 adapted to extend through holes 22 are placed in the compartment together with a roll of adhesive tape 26. The tape is of the type having both sides covered with adhesive, each side being covered with a separate removable protective paper layer 28.

The container shown in FIGURE 1 has the magnet, screws, plate and roll of adhesive each in a different compartment.

The kit can then be used as previously described.

While I have described my invention with particular reference to the drawings, my protection is to be limited only by the terms of the claims which follow.

Having thus described my invention, I claim as new and desire to secure by Letters Patent:

1. A kit comprising:

- a container having a removable lid;
- a metal plate disposed in the container;
- a roll of adhesive tape in the container;
- a bar magnet in the container; and
- a plurality of screws in the container.

2. A kit as set forth in claim 1 wherein said magnet has transverse holes which accommodate said screws.

3. A kit as set forth in claim 2 wherein both sides of said tape carry adhesive and each side is covered with a separate removable paper layer.

4. A kit as set forth in claim 3 wherein the container has two flat recesses, the plate disposed in one recess, the magnet being disposed in the other recess.

5. A kit as set forth in claim 4 wherein said container has a relatively deep compartment disposed between said recesses, said screws and tape being inserted in said compartment.
