(54) Title: METHOD AND SYSTEM FOR TRIGGERING INTERNET APPLICATIONS USING MESSAGES

(57) Abstract: There is described a system and a method for triggering an Internet application from an Internet-enabled computing device having access to information specific to a user, namely user-specific information. The Internet-enabled computing device for coupling to a network, the method comprising: receiving a message from the user via the network, the message having associated thereto user identification; comparing the user identification with the user-specific information; validating the user identification using the comparison; and upon positive validation, triggering the Internet application from the Internet-enabled computing device using the received message.
