UNITED STATES PATENT OFFICE.

LINWOOD U. KINDER, OF KANSAS CITY, MISSOURI, ASSIGNOR TO NATIONAL WOOD RENOVATING COMPANY, OF KANSAS CITY, MISSOURI, A CORPORATION OF MISSOURI.

ERASER FOR BLACKBOARDS.

Application filed April 17, 1922. Serial No. 554,111.

To all whom it may concern:

Be it known that I, LINWOOD U. KINDER, a citizen of the United States, residing at Kansas City, in the county of Jackson and State of Missouri, have invented a certain new and useful Improvement in Erasers for Blackboards, of which the following is a specification.

My invention relates to improvements in erasers for blackboards.

The object of my invention is to provide an eraser of the kind described, which is noiseless, simple, cheap to make, durable, and not liable to get out of order.

The novel features of my invention are hereinafter fully described and claimed.

In the accompanying drawing, which illustrates the preferred embodiment of my invention,

Fig. 1 is a perspective view, partly broken away, of my improved eraser.

Fig. 2 is a cross section of the same on the line 2—2 of Fig. 1.

Fig. 3 is a horizontal section on the line 3—3 of Fig. 1.

Similar reference characters designate similar parts in the different views.

1 designates a rigid back, which may be a flat piece of wood and to one side of which is secured an erasing pad 2, preferably felt, and which projects, preferably, beyond the outer edges of the back 1, which as shown, may be rectangular.

Attached to the other side of the back 1 is cushioning means comprising preferably, a cushioning pad 3, which may also project beyond the edges of the back 1. The cushioning pad 3 is preferably felt.

Flexible binding material, such as a strip of cloth 4, encircles the edges of the back 1 and is attached to the pads 2 and 3, and assists in preventing the pads from being detached from the back.

The rigid back prevents the eraser from being bent and distorted in shape. The provision of the cushioning pad 3 and the extension of the latter and of the erasing pad 2 beyond the edges of the back 1 affords cushioning means for the back which renders the eraser noiseless.

Any suitable means, such as gluing, may be employed for attaching the binding strip 4 to the pads and for attaching the latter to the back.

I do not limit my invention to the structure shown and described, as many modifications, within the scope of the appended claims, may be made without departing from the spirit of my invention.

What I claim is:—

1. An eraser for blackboards comprising a rigid back, an erasing pad attached to one side of said back, a cushioning pad attached to the other side of said back, and binding material encircling the edges of said back and attached to said pads, substantially as set forth.

2. An eraser for blackboards comprising a rigid back, an erasing pad attached to one side of said back, a cushioning pad attached to the other side of said back, said pads projecting beyond the edges of said back, and binding material encircling the edges of said back and attached to said pads, substantially as set forth.

In testimony whereof I have signed my name to this specification.

LINWOOD U. KINDER.
