(54) Title: INTERNET SCHEDULE SYSTEM AND METHOD FOR CONTROLLING THE SYSTEM

(57) Abstract: The present invention relates to an Internet schedule system, and a method for controlling it. More specifically, the present invention relates to a system and method for controlling it in which a user can be provided with updated information of predetermined Internet sites that are designated by the user. The user inputs the Internet sites to monitor, and the Internet schedule system checks periodically whether the information in the sites has been updated or not. If updated, the system informs the user of the updated information. Therefore, the user can easily get the updated information of the Internet sites that are monitored.

* Special categories of cited documents:

„A“ document defining the general state of the art which is not considered to be of particular relevance

„B“ earlier application or patent but published on or after the international filing date

„L“ document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

„O“ document referring to an oral disclosure, use, exhibition or other means

„P“ document published prior to the international filing date but later than the priority date claimed

„T“ later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

„X“ document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

„Y“ document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

„&“ document member of the same patent family
