(54) **Title:** METHOD AND SYSTEM FOR MANAGING ENTERPRISE CONTENT

FIG. 5

(57) **Abstract:** A method and system for providing a consistent flow documents and data content across different organizational units of a company or agency where the documents and data come from different enterprise systems and data stores but are related to linked processes that share models for organizing the content in the business context and in a format that enables a user to relate the content to the process step or steps they are performing. The system includes a network service that enables a configuration utility to automatically discover the objects and metadata and provides for a mapping of selected fields of the metadata to regions displayed in the user interface view with provision for filtering the data by mapping selected fields to a user input form. Thereby, a business analyst can create solutions without writing and maintaining complex program logic for each combination of presentation environment, enterprise system and data store.
