(54) Title: PORTABLE FLUID-TRANSPORTING SYSTEM

(57) Abstract: The present invention concerns embodiments of a portable fluid-transporting system for mounting on a land-driven vehicle, such as a loader, and methods for their use. In an illustrated embodiment, a fluid-transporting device includes at least one fluid container, or tank, that is mountable to and completely removable from a vehicle. The container is configured to be carried by the vehicle such that at least a portion of the container is supported in front of the forward end of the vehicle. In particular embodiments, the container is generally U-shaped and includes a forward-container portion and first and second side-container portions extending from respective ends of the forward-container portion.

* Special categories of cited documents:

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier application or patent published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

"&" document member of the same patent family
