⑤④ **Woven fabrics and a method of forming the same.**

⑤⑦ A method of forming a woven fabric comprises inter-
weaving polyester warp yarns with a plurality of weft yarns,
at least some of the weft yarns being polyamide multifila-
ment yarns impregnated with a non-cross-linked homol-
polymer or copolymer of acrylic acid. After weaving the fabric
is subjected to heat treatment to cause the impregnating
agent to cross-link and chemically bond to the polyamide
yarns, but not to the warp yarns. The resulting laterally
stiffened fabric is particularly suitable as webbing for use
in vehicle safety harnesses.
