(54) **CONTAINER**

(57) The present invention provides an improved container for the transport of small parceled items that can manage the contents the container, when the door is opened for unloading of the container. The novel container (1) includes a side frame section (200) and a hinge (600), which pivots a door (100) in respect to the side frame section (200) about a vertical axis for turning the door (100) between a closed and open configuration. The door (100) features a first and second panel element (110, 120), which both include a rectangular frame including a horizontal beam (111, 125). The first panel element (110) is attached to the side frame section (200) through the hinge (600). A pivoting member (140) is arranged to connect the horizontal beams (111, 125) of the first and second panel element (110, 120) and configured to provide a horizontal axis of revolution between the panel elements (110, 120).
