A synergistic fungicidal compound combination comprising: N-(3',4'-dichloro-5-fluoro-1,1'-biphenyl-2-yl)-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide, and at least one compound selected from the group consisting of azoxystrobin, fluoxastrobine, (2E)-2-(2-[[6-(3-chloro-2-methylphenoxo)-5-fluoro-4-pyrimidinyl(oxy)phenyl]-2-(methoxyazino)-N-methylthranamide, trifloxystrobin, (2E)-2-(methoxyazino)-N-methyl-2-2-[[1E]-1-[3-(trifluoromethyl)-phenyl]ethylden]amino]oxy[methyl]phenyl]ethanamide, (2E)-2-(methoxyazino)-N-methyl-2-[[1E]-1-[3-(trifluoromethyl)phenyl]ethyldene]methyl[phenyl]ethanamide, orysastrobin, 5-methoxy-2-methyl-4-(2-[[1E]-1-[3-(trifluoromethyl)-phenyl]ethylden]amino]oxy)methyl)phenyl)-2,4-dihydro-3H-1,2,4-triazol-3-one, kresoxim-methyl, dimoxystrobin, picoxystrobin, paraclostrobin, and methylnystrobin.
Abstract

A synergistic fungicidal compound combination comprising: \( N\)-(3',4'-dichloro-5-fluoro-1,1'-biphenyl-2-yl)-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide; and at least one compound selected from the group consisting of azoxystrobin, fluoxastrobin, \((2E)\)-2-(2-\{[6-(3-chloro-2-methylphenoxy)-5-fluoro-4-pyrimidinyl]oxy\}phenyl)-2-(methoxyimino)-N-methylethanamide, trifloxystrobin, \((2E)\)-2-(methoxyimino)-N-methyl-2-(2-\{[(1E)-1-[3-(trifluoromethyl)-phenyl]ethyliden] amino]oxy\}methyl\}phenyl\)ethanamide, \((2E)\)-2-(methoxyimino)-N-methyl-2-\{2-[(1E)-(1-[3-(trifluoromethyl)phenyl]-ethoxy)imino]methyl\}phenyl\)ethanamide, orysastrobin, 5-methoxy-2-methyl-4-(2-\{[(1E)-1-[3-(trifluoromethyl)-phenyl]ethyliden] amino]oxy\}methyl\}phenyl\)-2,4-dihydro-3\(H\)-1,2,4-triazol-3-one, kresoxim-methyl, dimoxystrobin, picoxytrobin, paraclostrobin, and metominostrobin.
Synergistic fungicidal active compound combinations

This is a first divisional application of Canadian Patent Application No. 2,541,646, filed September 28, 2004. It should be understood that the expression "the present invention" or the like used in this specification encompasses not only the subject matter of this divisional application but that of the parent application and other divisional applications also.

The present invention relates to novel active compound combinations comprising firstly known carboxamides and secondly further known fungicidally active compounds, which novel active compound combinations are highly suitable for controlling unwanted phytopathogenic fungi.

It is already known that certain carboxamides have fungicidal properties. Thus, for example, \(N\)-(3',4'-dichloro-5-fluoro-1',1'-biphenyl-2-yl)-3-(difluoromethyl)-1-methyl-1\(H\)-pyrazole-4-carboxamide is known from DE-A 102 15 292, 3-(trifluoromethyl)-\(N\)-\(3'\)-fluoro-\(4'\)-[(E)-(methoxyimino)methyl]-1',1'-biphenyl-2-yl)-1-methyl-1\(H\)-pyrazole-4-carboxamide is known from WO 02/08197 and \(N\)-(3',4'-dichloro-1',1'-biphenyl-2-yl)-5-fluoro-1,3-dimethyl-1\(H\)-pyrazole-4-carboxamide is known WO 00/14701. The activity of these compounds is good; however, at low application rates it is sometimes unsatisfactory. Furthermore, it is already known that numerous triazole derivatives, aniline derivatives, dicarboximides and other heterocycles can be used for controlling fungi (cf. EP-A 0 040 345, DE-A 22 01 063, DE-A 23 24 010, Pesticide Manual, 9th Edition (1991), pages 249 and 827, EP-A 0 382 375 and EP-A 0 515 901). However, the action of these compounds is likewise not always sufficient at low application rates. Furthermore, it is already known that 1-(3,5-dimethylisoxazole-4-sulphonyl)-2-chloro-6,6-difluoro-[1,3]-dioxolo-[4,5-f]-benzimidazole has fungicidal properties (cf. WO 97/06171). Finally, it is also known that substituted halopyrimidines have fungicidal properties (cf. DE-A1-196 46 407, EP-B 0 712 396).

The present invention now provides novel active compound combinations having very good fungicidal properties and comprising a carboxamide of the general formula (I) (group 1)
in which

R¹ represents hydrogen or fluorine,

R² represents halogen, C₁-C₃-alkyl, C₁-C₃-haloalkyl having 1 to 7 fluorine, chlorine and/or bromine atoms, C₁-C₃-alkoxy, C₁-C₃-haloalkoxy having 1 to 7 fluorine, chlorine and/or bromine atoms or represents -C(R⁴)=N-OR⁵.

R³ represents hydrogen, halogen, C₁-C₃-alkyl or C₁-C₃-haloalkyl having 1 to 7 fluorine, chlorine and/or bromine atoms,

R⁴ represents hydrogen or methyl,

R⁵ represents C₁-C₅-alkyl, C₁-C₅-alkenyl or C₁-C₅-alkynyl,
A represents one of the radicals A1 to A7 below:

\[
\begin{align*}
\text{R}^6 & \text{ represents C}_1\text{-C}_7\text{-alkyl, } \\
\text{R}^7 & \text{ represents hydrogen, halogen, C}_1\text{-C}_7\text{-alkyl or C}_1\text{-C}_7\text{-haloalkyl having 1 to 7 fluorine, chlorine and/or bromine atoms, } \\
\text{R}^8 & \text{ represents hydrogen, halogen or C}_1\text{-C}_7\text{-alkyl, } \\
\text{R}^9 & \text{ represents hydrogen, halogen, C}_1\text{-C}_7\text{-alkyl, amino, mono- or di(C}_1\text{-C}_7\text{-alkyl)amino, } \\
\text{R}^{10} & \text{ represents hydrogen, halogen, C}_1\text{-C}_7\text{-alkyl or C}_1\text{-C}_7\text{-haloalkyl having 1 to 7 fluorine, chlorine and/or bromine atoms, } \\
\text{R}^{11} & \text{ represents halogen, C}_1\text{-C}_7\text{-alkyl or C}_1\text{-C}_7\text{-haloalkyl having 1 to 7 fluorine, chlorine and/or bromine atoms, } \\
\text{R}^{12} & \text{ represents halogen, C}_1\text{-C}_7\text{-alkyl or C}_1\text{-C}_7\text{-haloalkyl having 1 to 7 fluorine, chlorine and/or bromine atoms, } \\
\text{R}^{13} & \text{ represents hydrogen, halogen, C}_1\text{-C}_7\text{-alkyl or C}_1\text{-C}_7\text{-haloalkyl having 1 to 7 fluorine, chlorine and/or bromine atoms, } \\
\end{align*}
\]

and at least one active compound selected from groups (2) to (23) below:

**Group (2) Strobilurins of the general formula (II)**

\[
\begin{align*}
\text{A}^{1} & \text{ represents one of the groups } \\
\text{A}^{2} & \text{ represents NH or O, } \\
\text{A}^{3} & \text{ represents N or CH, } \\
\text{L} & \text{ represents one of the groups } \\
\end{align*}
\]

where the bond marked with an asterisk (*) is attached to the phenyl ring,
R^{14} represents phenyl, phenoxy or pyridinyl, each of which is optionally mono- or disubstituted by identical or different substituents from the group consisting of chlorine, cyano, methyl and trifluoromethyl, or represents 1-(4-chlorophenyl)-pyrazol-3-yl or represents 1,2-propandione-bis(O-methylloxime)-1-yl,

R^{15} represents hydrogen or fluorine;

**Group (3) Triazoles of the general formula (III)**

![Diagram of the triazole structure](image)

in which

Q represents hydrogen or SH,

m represents 0 or 1,

R^{16} represents hydrogen, fluorine, chlorine, phenyl or 4-chlorophenoxy,

R^{17} represents hydrogen or chlorine,

A^4 represents a direct bond, -CH=CH-, -(CH₂)₂- or -O-,

A^4 furthermore represents -CH₂-CHR²⁻ or *-CH=CR²⁻ where the bond marked with * is attached to the phenyl ring, and

R^{18} and R^{20} furthermore together represent -CH₂-CH₂-CH[CH(CH₃)₂]- or

-CH₂-CH₂-C(CH₃)₂-, A^5 represents C or Si (silicon),

A^4 further represents -N(R²⁻) and A^5 furthermore together with R^{18} and R^{19} represents the group C=NR⁻²⁻ in which case R^{20} and R^{21} together represent the group

![Diagram of the amidine structure](image)

where the bond marked with * is attached to R^{20},

R^{18} represents hydrogen, hydroxyl or cyano,

R^{19} represents 1-cyclopropylethyl, 1-chlorocyclopropyl, C₁-C₄-alkyl, C₁-C₄-hydroxyalkyl, C₁-C₄-alkylcarboxyl, C₁-C₂-haloalkoxy-C₁-C₂-alkyl, trimethylsilyl-C₁-C₂-alkyl, monofluorophenyl or phenyl,

R^{18} and R^{19} furthermore together represent -O-CH₂-CH(R^{21})⁻⁻, -O-CH₂-CH(R^{21})⁻⁻CH₂⁻, or -O-CH(2-chlorophenyl),

R^{21} represents hydrogen, C₁-C₄-alkyl or bromine;
Group (4)  Sulphenamides of the general formula (IV)

\[

R\(^{52}\) represents C\(_1\)-C\(_6\)-alkyl, C\(_2\)-C\(_6\)-alkenyl or C\(_2\)-C\(_6\)-alkynyl.

Surprisingly, the fungicidal action of the active compound combinations according to the invention is considerably better than the sum of the activities of the individual active compounds. Thus, an unforeseeable true synergistic effect is present, and not just an addition of actions.

The formula (I) provides a general definition of the compounds of group (1).
In one aspect, the invention claimed in the parent application relates to a synergistic fungicidal compound combination comprising: N-(3'4'-dichloro-5-fluoro-1,1'-biphenyl-2-yl)-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide; and at least one compound selected from group consisting of: azaconazole, etaconazole, propiconazole, difenoconazole, bromuconazole, cyproconazole, hexaconazole, penconazole, myclobutanil, tetraconazole, flutriafol, epoxiconazole, flusilazole, simeconazole, prothioconazole, fenbuconazole, tebuconazole, ipconazole, metconazole, triticonazole, bitertanol, triadimenol, triadimefon, fluquinconazole, and quinconazole.

In one aspect, this first divisional application relates to a synergistic fungicidal compound combination comprising: N-(3',4'-dichloro-5-fluoro-1,1'-biphenyl-2-yl)-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide; and at least one compound selected from the group consisting of: azoxystrobin, fluoxastrobin, (2E)-2-(2-[[6-(3-chloro-2-methylphenoxy)-5-fluoro-4-pyrimidinyl]oxy]phenyl)-(methyl)imino)-N-methylethanamide, trifloxystrobin, (2E)-2-(methoxyimino)-N-methyl-2-(2-[[((1E)-1-[3-(trifluoromethyl)-phenyl]ethylideneamino)oxy]methyl]phenyl)ethanamide, (2E)-2-(methoxyimino)-N-methyl-2-([1E]-1-[3-(trifluoromethyl)phenyl]ethoxy)imino)methyl]phenyl)ethanamide, orysastrobin, 5-methoxy-2-methyl-4-(2-[[((1E)-1-[3-(trifluoromethyl)-phenyl]ethylideneamino)oxy]methyl]phenyl)-2,4-dihydro-3H-1,2,4-triazol-3-one, kresoxim-methyl, dimoxystrobin, picoxystrobin, paraclostrobin, and metominostrobin.

Preference is given to carboxamides of the formula (I) in which

R1 represents hydrogen or fluorine,
R² represents fluorine, chlorine, bromine, iodine, methyl, trifluoromethyl, trifluoromethoxy or represents -C(R³)=N-OR⁴,
R³ represents hydrogen, fluorine, chlorine, bromine, methyl or trifluoromethyl,
R⁴ represents hydrogen or methyl,
R⁵ represents C₁-C₃-alkyl,
A represents one of the radicals A₁ to A₇ below:

R⁶ represents methyl,
R⁷ represents iodine, methyl, difluoromethyl or trifluoromethyl,
R⁸ represents hydrogen, fluorine, chlorine or methyl,
R⁹ represents hydrogen, chlorine, methyl, amino or dimethylamino,
R¹⁰ represents methyl, difluoromethyl or trifluoromethyl,
R¹¹ represents chlorine, bromine, iodine, methyl, difluoromethyl or trifluoromethyl,
R¹² represents bromine or methyl,
R¹³ represents methyl or trifluoromethyl.

Particular preference is given to carboxamides of the formula (I) in which
R¹ represents hydrogen or fluorine,
R² represents fluorine, chlorine, bromine, trifluoromethyl or represents -CH=N-OCH₃,
R³ represents hydrogen, fluorine or chlorine,
A represents one of the radicals A₁ to A₅ below:

R⁶ represents methyl,
R⁷ represents methyl, difluoromethyl or trifluoromethyl,
R⁸ represents hydrogen or fluorine,
R⁹ represents methyl,
R¹⁰ represents methyl, difluoromethyl or trifluoromethyl,
R¹¹ represents iodine, difluoromethyl or trifluoromethyl,
R¹² represents methyl,
R¹³ represents methyl or trifluoromethyl.
Very particular preference is given to carboxamides of the formula (I) in which

\[ R^1 \] represents hydrogen or fluorine,
\[ R^2 \] represents fluorine, chlorine, bromine, trifluoromethyl or represents \(-\text{CH} = \text{N-OCH}_3\),
\[ R^3 \] represents hydrogen, fluorine or chlorine,
\[ A \] represents one of the radicals A1 or A2 below:

\[

\text{N} \\
\text{S} \\
\text{R}^8 \\
\text{R}^9 \\
\end{array}
\]

\[ R^5 \] represents methyl,
\[ R^7 \] represents methyl, difluoromethyl or trifluoromethyl,
\[ R^8 \] represents hydrogen or fluorine,
\[ R^9 \] represents methyl,
\[ R^{10} \] represents methyl, difluoromethyl or trifluoromethyl.

Very particular preference is given to using, in mixtures, compounds of the formula (Ia)

\[
\begin{array}{c}
\text{R}^2 \\
\text{R}^3 \\
\text{R}^4 \\
\text{R}^5 \\
\text{R}^6 \\
\text{R}^7 \\
\text{R}^8 \\
\text{R}^9 \\
\text{R}^{10} \\
\end{array}
\]

(Ia)

in which \( R^1, R^2, R^3, R^4, R^5 \) and \( R^6 \) are as defined above.

Very particular preference is given to using, in mixtures, compounds of the formula (Ib)

\[
\begin{array}{c}
\text{R}^2 \\
\text{R}^3 \\
\text{R}^4 \\
\text{R}^5 \\
\text{R}^6 \\
\text{R}^7 \\
\text{R}^8 \\
\text{R}^9 \\
\text{R}^{10} \\
\end{array}
\]

(Ib)

in which \( R^1, R^2, R^3, R^9 \) and \( R^{10} \) are as defined above.

The formula (I) embraces in particular the following preferred mixing partners of group (I):

\[ (1-1) \quad N-(3',4'-\text{dichloro}-5\text{-fluoro}-1,1'-\text{biphenyl}-2\text{-yl})-3\text{-}(\text{difluoromethyl})-1\text{-methyl}-1\text{H}-\text{pyrazole} \]
Emphasis is given to active compound combinations according to the invention which, in addition to carboxamide (1-1) \( N(3',4'-\text{dichloro}-5\text{-fluoro},1',1\text{-biphenyl}-2\text{-yl})-3\text{-}(\text{difluoromethyl})-1\text{-methyl-}1H\)-pyrazole-4-carboxamide (group 1) comprise one or more, preferably one, mixing partner of groups (2) to (23).

Emphasis is given to active compound combinations according to the invention which, in addition to carboxamide (1-7) \( N(4'\text{-bromo},1',1\text{-biphenyl}-2\text{-yl})-4\text{-}(\text{difluoromethyl})-2\text{-methyl-}1,3\text{-thiazole-5}-\text{carboxamide (group 1) comprise one or more, preferably one, mixing partner of groups (2) to (23).}

Emphasis is given to active compound combinations according to the invention which, in addition to carboxamide (1-8) \( 4\text{-}(\text{difluoromethyl})-2\text{-methyl-}N[4'\text{-}(\text{trifluoromethyl})]-1',1\text{-biphenyl}-2\text{-yl}-1,3\text{-thiazole-5}-\text{carboxamide (group 1) comprise one or more, preferably one, mixing partner of groups (2) to (23).}

Emphasis is given to active compound combinations according to the invention which, in addition to carboxamide (1-9) \( N(4'\text{-chloro}-3\text{-fluoro},1',1\text{-biphenyl}-2\text{-yl})-4\text{-}(\text{difluoromethyl})-2\text{-methyl-}1,3\text{-thiazole-5}-\text{carboxamide (group 1) comprise one or more, preferably one, mixing partner of groups (2) to (23).}

The formula (II) embraces the following preferred mixing partners of group (2):
(2-1) azoxystrobin (known from EP-A 0 382 375) of the formula

(2-2) fluoxastrobin (known from DE-A 196 02 095) of the formula

(2-4) trifloxystrobin (known from EP-A 0 460 575) of the formula

(2-6) (2E)-2-(methoxyimino)-N-methyl-2-2-[[E]-([1-3-(trifluoromethyl)phenyl]ethoxy)imino]-methyl[phenyl]ethanamide (known from EP-A 0 596 254) of the formula
(2-7) orysastrobin (known from DE-A 195 39 324) of the formula

(2-8) 5-methoxy-2-methyl-4-(2-[(1E)-1-[3-(trifluoromethyl)phenyl]ethylidene]amino)oxy]-methyl)phenyl)-2,4-dihydro-3H-1,2,4-triazol-3-one (known from WO 98/23155) of the formula

(2-9) kresoxim-methyl (known from EP-A 0 253 213) of the formula

(2-10) dimoxystrobin (known from EP-A 0 398 692) of the formula

(2-11) picoxystrobin (known from EP-A 0 278 595) of the formula

(2-12) pyraclostrobin (known from DE-A 44 23 612) of the formula
(2-13) metominostrobin (known from EP-A 0 398 692) of the formula

\[
\begin{align*}
\text{H}_2\text{C}-&\text{O} \quad \text{N} \quad \text{N} \quad \text{CH}_3 \\
\text{phenyl} & \quad \text{O} \quad \text{phenyl}
\end{align*}
\]

The formula (III) embraces the following preferred mixing partners of group (3):

(3-1) azaconazole (known from DE-A 25 51 560) of the formula

\[
\begin{align*}
\text{Cl} \quad \text{H}_2\text{C}-&\text{O} \quad \text{O} \\
\text{Cl} & \quad \text{CH}_2 \quad \text{N} \quad \text{N}
\end{align*}
\]

(3-2) etaconazole (known from DE-A 25 51 560) of the formula

\[
\begin{align*}
\text{H}_2\text{C} \quad \text{Cl} \quad \text{Cl} & \quad \text{O} \quad \text{O} \\
\text{Cl} & \quad \text{CH}_2 \quad \text{N} \quad \text{N}
\end{align*}
\]

(3-3) propiconazole (known from DE-A 25 51 560) of the formula

\[
\begin{align*}
\text{n-Pr} & \quad \text{Cl} \quad \text{Cl} \quad \text{Cl} \\
\text{O} & \quad \text{O} \quad \text{CH}_2 \quad \text{N} \quad \text{N}
\end{align*}
\]

(3-4) difenoconazole (known from EP-A 0 112 284) of the formula

\[
\begin{align*}
\text{H}_2\text{C} \quad \text{Cl} \quad \text{Cl} & \quad \text{O} \quad \text{O} \\
\text{Cl} & \quad \text{CH}_2 \quad \text{N} \quad \text{N}
\end{align*}
\]

(3-5) bromuconazole (known from EP-A 0 258 161) of the formula

\[
\begin{align*}
\text{Br} & \quad \text{Cl} \quad \text{Cl} \\
\text{Cl} & \quad \text{CH}_2 \quad \text{N} \quad \text{N}
\end{align*}
\]

(3-6) cyproconazole (known from DE-A 34 06 993) of the formula
(3-7) hexaconazole (known from DE-A 30 42 303) of the formula

(3-8) penconazole (known from DE-A 27 35 872) of the formula

(3-9) myclobutanil (known from EP-A 0 145 294) of the formula

(3-10) tetraconazole (known from EP-A 0 234 242) of the formula

(3-11) flutriafol (known from EP-A 0 015 756) of the formula

(3-12) epoxiconazole (known from EP-A 0 196 038) of the formula
(3-13) flusilazole (known from EP-A 0 068 813) of the formula

(3-14) simeconazole (known from EP-A 0 537 957) of the formula

(3-15) prothioconazole (known from WO 96/16048) of the formula

(3-16) fenbuconazole (known from DE-A 37 21 786) of the formula

(3-17) tebuconazole (known from EP-A 0 040 345) of the formula

(3-18) ipconazole (known from EP-A 0 329 397) of the formula
(3-19) metconazole (known from EP-A 0 329 397) of the formula

(3-20) triticonazole (known from EP-A 0 378 953) of the formula

(3-21) bitertanol (known from DE-A 23 24 010) of the formula

(3-22) triadimenol (known from DE-A 23 24 010) of the formula

(3-23) triadimefon (known from DE-A 22 01 063) of the formula

(3-24) fluquinconazole (known from EP-A 0 183 458) of the formula
quinconazole (known from EP-A 0 183 458) of the formula

The formula (IV) embraces the following preferred mixing partners of group (4):

(4-1) dichlofluanid (known from DE-A 11 93 498) of the formula

(4-2) tolylfluanid (known from DE-A 11 93 498) of the formula

Preferred mixing partners of group (5) are

(5-1) iprovalicarb (known from DE-A 40 26 966) of the formula

(5-3) bentiavalicarb (known from WO 96/04252) of the formula
The formula (V) embraces the following preferred mixing partners of group (6):

(6-1) 2-chloro-N-(1,1,3-trimethylindan-4-yl)nicotinamide (known from EP-A 0 256 503) of the formula

\[
\begin{array}{c}
\text{Cl} \\
\text{N} \\
\text{O} \\
\end{array}
\]

(6-2) bosalid (known from DE-A 195 31 813) of the formula

\[
\begin{array}{c}
\text{Cl} \\
\text{N} \\
\text{O} \\
\text{Cl} \\
\end{array}
\]

(6-3) furametpyr (known from EP-A 0 315 502) of the formula

\[
\begin{array}{c}
\text{H}_3\text{C} \\
\text{N} \\
\text{O} \\
\text{N} \\
\text{Cl} \\
\text{CH}_3 \\
\text{CH}_3 \\
\end{array}
\]

(6-4) N-(3-p-tolythiophen-2-yl)-1-methyl-3-trifluoromethyl-1H-pyrazole-4-carboxamide (known from EP-A 0 737 682) of the formula

\[
\begin{array}{c}
\text{F}_3\text{C} \\
\text{N} \\
\text{O} \\
\text{S} \\
\text{Cl} \\
\text{CH}_3 \\
\text{CH}_3 \\
\end{array}
\]

(6-5) ethaboxam (known from EP-A 0 639 574) of the formula

\[
\begin{array}{c}
\text{Et} \\
\text{N} \\
\text{O} \\
\text{CN} \\
\text{S} \\
\text{S} \\
\text{HNET} \\
\end{array}
\]

(6-6) fenhexamid (known from EP-A 0 339 418) of the formula
(6-7) carpropanid (known from EP-A 0 341 475) of the formula

(6-8) 2-chloro-4-(2-fluoro-2-methylpropionylamino)-N,N-dimethylbenzamide (known from EP-A 0 600 629) of the formula

(6-9) picobenzamid (known from WO 99/42447) of the formula

(6-10) zoxamide (known from EP-A 0 604 019) of the formula

(6-11) 3,4-dichloro-N-(2-cyanophenyl)isothiazole-5-carboxamide (known from WO 99/24413) of the formula

(6-12) carboxin (known from US 3,249,499) of the formula
(6-13) tiadinil (known from US 6,616,054) of the formula

(6-14) pentiopyrad (known from EP-A 0 737 682) of the formula

5 (6-15) silthiofam (known from WO 96/18631) of the formula

(6-16) \(N\{2-(1,3\text{-dimethylbutyl})\text{phenyl}\}-1\text{-methyl-4-(trifluoromethyl)}-1H\text{-pyrrole-3-carboxamide}\)
(known from WO 02/38542) of the formula

10 Preferred mixing partners of group (7) are

(7-1) mancozeb (known from DE-A 12 34 704) having the IUPAC name manganese ethylenebis(dithiocarbamate) (polymeric) complex with zinc salt

(7-2) mane (known from US 2,504,404) of the formula

15 (7-3) metiram (known from DE-A 10 76 434) having the IUPAC name zinc ammoniate ethylenebis(dithiocarbamate)-poly(ethylenethiuram disulphide)

(7-4) propineb (known from GB 935 981) of the formula
(7-5) thiram (known from US 1,972,961) of the formula

\[
\begin{array}{c}
\text{H}_2\text{C}-\text{N} & \text{S-S} & \text{N} & \text{S-S} & \text{N} & \text{CH}_3 \\
\text{CH}_3 & & & & & \\
\end{array}
\]

(7-6) zineb (known from DE-A 10 81 446) of the formula

\[
\begin{array}{c}
\text{S-S} & \text{N} & \text{S-S} & \text{N} & \text{CH}_3 \\
\cdots & & & & \\
\end{array}
\]

(7-7) ziram (known from US 2,588,428) of the formula

\[
\begin{array}{c}
\text{H}_2\text{C}-\text{N} & \text{S-S} & \text{Zn} & \text{N-S} & \text{N} & \text{CH}_3 \\
\text{CH}_3 & & & & & \\
\end{array}
\]

The formula (VI) embraces the following preferred mixing partners of group (8):

(8-1) benalaxyl (known from DE-A 29 03 612) of the formula

\[
\begin{array}{c}
\text{H}_3\text{C}-\text{N} & \text{CO}_2\text{CH}_3 \\
\text{CH}_3 & \\
\end{array}
\]

(8-2) furalaxyl (known from DE-A 25 13 732) of the formula

\[
\begin{array}{c}
\text{H}_3\text{C}-\text{N} & \text{CO}_2\text{CH}_3 \\
\text{CH}_3 & \\
\end{array}
\]

(8-3) metalaxyl (known from DE-A 25 15 091) of the formula

\[
\begin{array}{c}
\text{H}_3\text{C}-\text{N} & \text{CO}_2\text{CH}_3 \\
\text{CH}_3 & \\
\end{array}
\]

(8-4) metalaxyl-M (known from WO 96/01559) of the formula
The formula (VII) embraces the following preferred mixing partners of group (9):

9-1) cyprodinil (known from EP-A 0 310 550) of the formula

9-2) mepanipyrim (known from EP-A 0 270 111) of the formula

9-3) pyrimethanil (known from DD 151 404) of the formula

The formula (VIII) embraces the following preferred mixing partners of group (10):

10-1) 6-chloro-5-{[3,5-dimethylisoxazol-4-yl]sulphonyl}-2,2-difluoro-5H-[1,3]dioxolo[4,5-f]-benzimidazole (known from WO 97/06171) of the formula
(10-2) benomyl (known from US 3,631,176) of the formula

(10-3) carbendazim (known from US 3,910,968) of the formula

(10-4) chlorfenazole of the formula

(10-5) flubendazole (known from DE-A 12 09 799) of the formula

(10-6) thiabendazole (known from US 3,206,468) of the formula

The formula (IX) embraces the following preferred mixing partners of group (11):

(11-1) diethofencarb (known from EP-A 0 078 663) of the formula

(11-2) propamocarb (known from US 3,513,241) of the formula
(11-3) propamocarb-hydrochloride (known from US 3,513,241) of the formula

(11-4) propamocarb-fosetyl of the formula

Preferred mixing partners of group (12) are
(12-1) captfol (known from US 3,178,447) of the formula

(12-2) captan (known from US 2,553,770) of the formula

(12-3) folpet (known from US 2,553,770) of the formula

(12-4) iprodione (known from DE-A 21 49 923) of the formula

(12-5) procymidone (known from DE-A 20 12 656) of the formula

(12-6) vinclozolin (known from DE-A 22 07 576) of the formula
Preferred mixing partners of group (13) are

(13-1) dodine (known from GB 11 03 989) of the formula

\[
\begin{align*}
\text{H}_2\text{N} & - \text{N} - \text{C} - \text{CH}_3 & \text{O}^- - \text{CH}_3
\end{align*}
\]

(13-2) guazatine (known from GB 11 14 155)

(13-3) iminocadine triacetate (known from EP-A 0 155 509) of the formula

\[
\begin{align*}
\text{H}_2\text{N} & - \text{N} - \text{C} - \text{NH}_2 & \text{OH}
\end{align*}
\]

Preferred mixing partners of the group (14) are

(14-1) cyazofamid (known from EP-A 0 298 196) of the formula

\[
\begin{align*}
\text{N} & - \text{N} & \text{SO}_2\text{NMe}_2
\end{align*}
\]

(14-2) prochloraz (known from DE-A 24 29 523) of the formula

\[
\begin{align*}
\text{Cl} - & \text{N} - \text{O} - \text{C} - \text{CH}_3
\end{align*}
\]

(14-3) triazoxide (known from DE-A 28 02 488) of the formula

\[
\begin{align*}
\text{N} - & \text{N} - \text{Cl}
\end{align*}
\]

(14-4) pefurazoate (known from EP-A 0 248 086) of the formula

\[
\begin{align*}
\text{O}^- - & \text{O} - \text{C} - \text{CH}_2
\end{align*}
\]

The formula (X) embraces the following preferred mixing partners of group (15):
(15-1) aldimorph (known from DD 140 041) of the formula

(15-2) tridemorph (known from GB 988 630) of the formula

(15-3) dodecaphimorph (known from DE-A 25 432 79) of the formula

(15-4) fenpropimorph (known from DE-A 26 56 747) of the formula

(15-5) dimethomorph (known from EP-A 0 219 756) of the formula

The formula (XI) embraces the following preferred mixing partners of group (16):

(16-1) fenpiclonil (known from EP-A 0 236 272) of the formula

(16-2) fludioxonil (known from EP-A 0 206 999) of the formula
(16-3) pyrolo[nitrin (known from JP 65-25876) of the formula

Preferred mixing partners of group (17) are

5 (17-1) fosetyl-AI (known from DE-A 24 56 627) of the formula

(17-2) phosphoric acid (known chemical) of the formula

The formula (XII) embraces the following preferred mixing partners of group (18) which are known
10 from WO 96/23793 and can in each case be present as E or Z isomers. Accordingly, compounds of
the formula (XII) can be present as a mixture of different isomers or else in the form of a single
isomer. Preference is given to compounds of the formula (XII) in the form of their E isomers:

(18-1) 2-(2,3-dihydro-1H-inden-5-yl)-N-[2-(3,4-dimethoxyphenyl)ethyl]-2-(methoxyimino)acetamide of the formula

15 (18-2) N-[2-(3,4-dimethoxyphenyl)ethyl]-2-(methoxyimino)-2-(5,6,7,8-tetrahydronaphthalen-2-y1)acetamide of the formula

(18-3) 2-(4-chlorophenyl)-N-[2-(3,4-dimethoxyphenyl)ethyl]-2-(methoxyimino)acetamide of the
formula

(18-4) 2-(4-bromophenyl)-N-[2-(3,4-dimethoxyphenyl)ethyl]-2-(methoxyimino)acetamide of the formula

(18-5) 2-(4-methylphenyl)-N-[2-(3,4-dimethoxyphenyl)ethyl]-2-(methoxyimino)acetamide of the formula

(18-6) 2-(4-ethylphenyl)-N-[2-(3,4-dimethoxyphenyl)ethyl]-2-(methoxyimino)acetamide of the formula

Preferred mixing partners of group (19) are

(19-1) acibenzolar-S-methyl (known from EP-A 0 313 512) of the formula

(19-2) chlorothalonil (known from US 3,290,353) of the formula

(19-3) cymoxanil (known from DE-A 23 12 956) of the formula
(19-4) edifenphos (known from DE-A 14 93 736) of the formula

(19-5) famoxidone (known from EP-A 0 393 911) of the formula

(19-6) fluazinam (known from EP-A 0 031 257) of the formula

(19-7) copper oxychloride

(19-9) oxadixyl (known from DE-A 30 30 026) of the formula

(19-10) spiroxamine (known from DE-A 37 35 555) of the formula

(19-11) dithianon (known from JP-A 44-29464) of the formula

(19-12) metrafenone (known from EP-A 0 897 904) of the formula
(19-13) fenamidone (known from EP-A 0 629 616) of the formula

(19-14) 2,3-dibutyl-6-chlorothieno[2,3-d]pyrimidin-4(3H)one (known from WO 99/14202) of the formula

(19-15) probenazole (known from US 3,629,428) of the formula

(19-16) isoprothiolane (known from US 3,856,814) of the formula

(19-17) kasugamycin (known from GB 1 094 567) of the formula

(19-18) phthalide (known from JP-A 57-55844) of the formula

(19-19) ferimzone (known from EP-A 0 019 450) of the formula
(19-20) tricyclazole (known from DE-A 22 50 077) of the formula

(19-21) N-{[4-[(cyclopropylamino)carbonyl]phenyl]sulphonyl}-2-methoxybenzamide of the formula

(19-22) 2-[(4-chlorophenyl)-N-{[3-methoxy-4-(prop-2-yn-1-yl)oxy]phenyl]ethyl}-2-(prop-2-yn-1-yl)oxy)acetamide (known from WO 01/87822) of the formula

Preferred mixing partners of group (20) are

(20-1) pencycuron (known from DE-A 27 32 257) of the formula

(20-2) thiophanate-methyl (known from DE-A 18 06 123) of the formula

(20-3) thiophanate-ethyl (known from DE-A 18 06 123) of the formula
Preferred mixing partners of group (21) are:

(21-1) fenoxanil (known from EP-A 0 262 393) of the formula

(21-2) diclocymet (known from JP-A 7-206668) of the formula

Preferred mixing partners of group (22) are:

(22-1) 5-chloro-N-[(1S)-2,2,2-trifluoro-1-methylethyl]-6-(2,4,6-trifluorophenyl)[1,2,4]triazolo-[1,5-a]pyrimidine-7-amine (known from US 5,986,135) of the formula

(22-2) 5-chloro-N-[(1R)-1,2-dimethylpropyl]-6-(2,4,6-trifluorophenyl)[1,2,4]triazolo[1,5-a]pyrimidine-7-amine (known from WO 02/38565) of the formula

(22-3) 5-chloro-6-(2-chloro-6-fluorophenyl)-7-(4-methylpiperidin-1-yl)[1,2,4]triazolo[1,5-a]pyrimidine (known from US 5,593,996) of the formula
(22-4) 5-chloro-6-(2,4,6-trifluorophenyl)-7-(4-methylpiperidin-1-yl)[1,2,4]triazolo[1,5-a]pyrimidine
(known from DE-A 101 24 208) of the formula

Preferred mixing partners of group (23) are

5  (23-1) 2-butoxy-6-iodo-3-propylbenzopyran-4-one (known from WO 03/014103) of the formula

(23-2) 2-ethoxy-6-iodo-3-propylbenzopyran-4-one (known from WO 03/014103) of the formula

(23-3) 6-iodo-2-propxoy-3-propylbenzopyran-4-one (known from WO 03/014103) of the formula

(23-4) 2-but-2-ynyloxy-6-iodo-3-propylbenzopyran-4-one (known from WO 03/014103) of the formula

(23-5) 6-iodo-2-(1-methylbutoxy)-3-propylbenzopyran-4-one (known from WO 03/014103) of the formula

(23-6) 2-but-3-enyloxy-6-iodobenzopyran-4-one (known from WO 03/014103) of the formula
Compound (6-7), carpropanid, has three asymmetrically substituted carbon atoms. Accordingly, compound (6-7) can be present as a mixture of different isomers or else in the form of a single component. Particular preference is given to the compounds

\[(1S,3R)-2,2\text{-dichloro-N-\{\(1R\)\}-\{(4-chlorophenyl)ethyl\}-1-ethyl-3-methylcyclopropanecarboxamide}\]

and

\[(1R,3S)-2,2\text{-dichloro-N-\{\(1R\)\}-\{(4-chlorophenyl)ethyl\}-1-ethyl-3-methylcyclopropanecarboxamide}\]

Particularly preferred mixing partners are the following active compounds:

1. azoxystrobín
2. fluoxastrobín
3. \((2E)-2-(6-(3\text{-chloro-2-methylphenoxy})\text{-5-fluoro-4-pyrimidinyloxy})\text{-phenyl})\text{-N-methylethanamide}\)
4. \((2E)-2-(\text{methoxyimino})\text{-N-methyl-2-(2-[[[\(1E\)]\}-1\text{-[3-(trifluoromethyl)phenyl]ethylidenepoxy}]methyl]phenyl)ethanamide}\)
5. \((2E)-2-(\text{methoxyimino})\text{-N-methyl-2-[[1-[3-(trifluoromethyl)phenyl]ethoxy]imino)methyl]phenyl)ethanamide}\)
6. \(5\text{-methoxy-2-methyl-4-(2-[[[\(1E\)]\}-1\text{-[3-(trifluoromethyl)phenyl]ethylidenepoxy}]methyl]phenyl)ethanamide}\)
amino)oxy[methyl]phenyl]-2,4-dihydro-3H-1,2,4-triazol-3-one

(2-11)  picoxystrobin
(2-9)  kresoxim-methyl
(2-10)  dimoxystrobin
5  (2-12)  pyraclostrobin
(2-13)  metominostrobin
(3-3)  propiconazole
(3-4)  difenoconazole
(3-6)  cyproconazole
10  (3-7)  hexaconazole
(3-8)  penconazole
(3-9)  myclobutanil
(3-10)  tetraconazole
(3-13)  flusilazole
15  (3-15)  prothioconazole
(3-16)  fenbuconazole
(3-17)  tebuconazole

(23-1) 2-butoxy-6-ido-3-propylbenzopyran-4-one
(23-2) 2-ethoxy-6-ido-3-propylbenzopyran-4-one
(23-3) 6-ido-2-propoxy-3-propylbenzopyran-4-one

Very particularly preferred mixing partners are the following active compounds:
(2-2) fluoxastrobin
(2-3) (2E)-2-[(6-(3-chloro-2-methylphenoxy)-5-fluoro-4-pyrimidinyl)oxy]phenyl)-2-(methoxyimino)-N-methylethanamide
(2-4) trifloxystrobin
(3-15) prothioconazole
(3-17) tebuconazole
(3-21) bitertanol
(3-22) triadimenol
(3-24) fluquinconazole
(4-1) dichlofluanid
(4-2) tolyfluanid
(5-1) iprovalicarb
(6-6) fenhexamid
Preferred active compound combinations consisting of two groups of active compounds and comprising in each case at least one carboxamide of the formula (I) (group 1) and at least one active compound from the stated group (2) to (23) are described below. These combinations are the active compound combinations A to T.

Among the preferred active compound combinations A to T, emphasis is given to those comprising a carboxamide of the formula (I) (group 1)

\[ \text{(I)} \]

in which \( R^1, R^2, R^3 \) and A are as defined above.

Particular preference is given to active compound combinations A to T comprising a carboxamide of the formula (I) (group 1)
in which

R¹ represents hydrogen or fluorine,

R² represents fluorine, chlorine, bromine, trifluoromethyl or represents \(-\text{CH}=\text{N-OCH₃}\),

R³ represents hydrogen, fluorine or chlorine,

A represents one of the radicals A₁ or A₂ below:

R⁶ represents methyl,

R⁷ represents methyl, difluoromethyl or trifluoromethyl,

R⁸ represents hydrogen or fluorine,

R⁹ represents methyl,

R¹₀ represents methyl, difluoromethyl or trifluoromethyl.

Very particular preference is given to active compound combinations A to T in which the carboxamide of the formula (I) (group 1) is selected from the list below:

(1-1) \(N-(3',4'-\text{dichloro}-5\text{-fluoro}-1,1'-\text{biphenyl}-2\text{-yl})-3-(\text{difluoromethyl})-1\text{-methyl-1H-pyrazole-4-carboxamide}\)

(1-2) \(3-(\text{difluoromethyl})-N-(3'-\text{fluoro}-4'-(\text{E})-(\text{methoxyimino})\text{methyl})-1,1'-\text{biphenyl}-2\text{-yl})-1\text{-methyl-1H-pyrazole-4-carboxamide}\)

(1-3) \(3-(\text{trifluoromethyl})-N-(3'-\text{fluoro}-4'-(\text{E})-(\text{methoxyimino})\text{methyl})-1,1'-\text{biphenyl}-2\text{-yl})-1\text{-methyl-1H-pyrazole-4-carboxamide}\)

(1-4) \(N-(3',4'-\text{dichloro}-1,1'-\text{biphenyl}-2\text{-yl})-5\text{-fluoro-1,3-dimethyl-1H-pyrazole-4-carboxamide}\)

(1-5) \(N-(4'-\text{chloro}-3'-\text{fluoro}-1,1'-\text{biphenyl}-2\text{-yl})-2\text{-methyl-4-(trifluoromethyl)-1,3-thiazole-5-carboxamide}\)

(1-6) \(N-(4'-\text{chloro}-1,1'-\text{biphenyl}-2\text{-yl})-4-(\text{difluoromethyl})-2\text{-methyl-1,3-thiazole-5-carboxamide}\)

(1-7) \(N-(4'-\text{bromo}-1,1'-\text{biphenyl}-2\text{-yl})-4-(\text{difluoromethyl})-2\text{-methyl-1,3-thiazole-5-carboxamide}\)

(1-8) \(4-(\text{difluoromethyl})-2\text{-methyl-N-[4'-(trifluoromethyl)]-1,1'-biphenyl-2-yl}-1,3\text{-thiazole-5-carboxamide}\)
5 carboxamide

(1-9) \( N-(4\text{-}\text{chloro}-3\text{-}\text{fluoro}-1,1\text{'}\text{-}\text{biphenyl}-2\text{-}\text{yl})-4\text{-}(\text{difluoromethyl})\text{-}2\text{-}\text{methyl}-1,3\text{-}\text{thiazole}-5\text{-}\text{carboxamide} \)

Especially preferred are active compound combinations A to T in which the carboxamide of the formula (I) (group 1) is selected from the list below:

(1-1) \( N-(3\text{'}\text{-}\text{dichloro}-5\text{-}\text{fluoro}-1,1\text{'}\text{-}\text{biphenyl}-2\text{-}\text{yl})-3\text{-}(\text{difluoromethyl})\text{-}1\text{-}\text{methyl}-1H\text{-}\text{pyrazole}-4\text{-}\text{carboxamide} \)

(1-7) \( N-(4\text{'-bromo}-1,1\text{'}\text{-}\text{biphenyl}-2\text{-}\text{yl})-4\text{-}(\text{difluoromethyl})\text{-}2\text{-}\text{methyl}-1,3\text{-}\text{thiazole}-5\text{-}\text{carboxamide} \)

(1-8) \( 4\text{-}(\text{difluoromethyl})\text{-}2\text{-}\text{methyl}-N\{4\text{'-}((\text{trifluoromethyl})\text{-}1,1\text{'}\text{-}\text{biphenyl}-2\text{-}\text{yl})\text{-}1,3\text{-}\text{thiazole}-5\text{-}\text{carboxamide} \)

(1-9) \( N-(4\text{'-chloro}-3\text{-}\text{fluoro}-1,1\text{'}\text{-}\text{biphenyl}-2\text{-}\text{yl})-4\text{-}(\text{difluoromethyl})\text{-}2\text{-}\text{methyl}-1,3\text{-}\text{thiazole}-5\text{-}\text{carboxamide} \)

In addition to a carboxamide of the formula (I) (group 1), the active compound combinations A also comprise a strobilurin of the formula (II) (group 2)

\[
\begin{array}{c}
\text{A}^{1} \\
\bigg\{ \\
\text{L} \\
\bigg\} \\
\text{R}^{14}
\end{array}
\]

(II)

in which \( A^{1}, L \) and \( R^{14} \) are as defined above.

Particular preference is given to active compound combinations A in which the strobilurin of the formula (II) (group 2) is selected from the list below:

(2-1) azoxystrobin
(2-2) fluoxastrobin
(2-3) \( (2E)-2-(2\{(6\text{-}3\text{-}\text{chloro}-2\text{-}\text{methylphenoxy})\text{-}5\text{-}\text{fluoro}-4\text{-}\text{pyrimidinyl} \text{oxy} \text{ phenyl}\}-2\text{-}(\text{methoxyimino})\text{-}N\text{-methyl} \text{ethanamide} \)

(2-4) trifloxystrobin
(2-5) \( (2E)-2\text{-}(\text{methoxyimino})\text{-}N\text{-methyl}-2\{(1\{1\text{E})\text{-}1\{3\text{-}(\text{trifluoromethyl})\text{phenyl} \text{ethylidene})\text{-} \\
\text{amino} \text{oxy} \text{methyl} \text{ phenyl} \text{ ethanamide} \)

(2-6) \( (2E)-2\text{-}(\text{methoxyimino})\text{-}N\text{-methyl}-2\{2\{(1\{3\text{-}(\text{trifluoromethyl})\text{phenyl} \text{ethoxy} \text{ imino}- \\
\text{methyl} \text{ phenyl} \text{ ethanamide} \)

(2-7) oryastrobin
(2-8) \( 5\text{-}\text{methoxy}-2\text{-}\text{methyl}-4\{(1\{1\text{E})\text{-}1\{3\text{-}(\text{trifluoromethyl})\text{phenyl} \text{ethylidene})\text{amino} \text{oxy}- \\
\text{methyl} \text{ phenyl})\text{-}2,4\text{-}\text{dihydro}-3\text{H}-1,2,4\text{-}\text{triazol}-3\text{-} \text{one} \)

(2-9) kresoxim-methyl
(2-10) dimoxystrobin
Very particular preference is given to active compound combinations A in which the strobilurin of the formula (II) (group 2) is selected from the list below:

- (2-1) azoxystrobin
- (2-2) fluoxastrobine
- (2-3) (2E)-2-(2-[[6-(3-chloro-2-methylphenoxy)-5-fluoro-4-pyrimidinyl]oxy]phenyl)-2-(methoxyimino)-N-methylethanamide
- (2-4) trifloxystrobin
- (2-12) pyraclostrobin
- (2-9) kreoxin-methyl
- (2-10) dimoxystrobin
- (2-11) picoxystrobin
- (2-13) metominostrobin

Emphasis is given to the active compound combinations A listed in Table 1 below:

</table>

In addition to a carboxamide of the formula (I) (group 1), the active compound combinations B also comprise a triazole of the formula (III) (group 3)
in which Q, m, R^16, R^17, A^4, A^5, R^18 and R^19 are as defined above.

Preference is given to active compound combinations B in which the triazole of the formula (III) (group 3) is selected from the list below:

5  (3-1)  azaconazole
     (3-2)  etaconazole
     (3-3)  propiconazole
     (3-4)  difenoconazole
     (3-5)  bromuconazole
10  (3-6)  cyproconazole
     (3-7)  hexaconazole
     (3-8)  penconazole
     (3-9)  mycolbutanil
     (3-10) tetraconazole
15  (3-11) flutriafol
     (3-12) epoxiconazole
     (3-13) flusilazole
     (3-14) simeconazole
     (3-15) prothioconazole
20  (3-16) fenbuconazole
     (3-17) tebuconazole
     (3-18) ipconazole
     (3-19) metconazole
     (3-20) triticonazole
25  (3-21) bitertanol
     (3-22) triadimenol
     (3-23) triadimefon
     (3-24) fluquinconazole
     (3-25) quinconazole

Particular preference is given to active compound combinations B in which the triazole of the formula (III) (group 3) is selected from the list below:
Emphasis is given to the active compound combinations B listed in Table 2 below:

In addition to a carboxamide of the formula (I) (group 1), the active compound combinations E also comprise a carboxamide of the formula (V) (group 6)
in which X, Y and Z are as defined above.

Preference is given to active compound combinations E in which the carboxamide of the formula (V)

(6) is selected from the list below:

(6-1) 2-chloro-N-(1,1,3-trimethylinden-4-yl)nicotinamide
(6-2) boscalid
(6-3) furanetpyr
(6-4) N-(3-p-tolythiophen-2-yl)-1-methyl-3-trifluoromethyl-1H-pyrazole-4-carboxamide
(6-5) ethaboxam
(6-6) fenhexamid
(6-7) carpropanid
(6-8) 2-chloro-4-(2-fluoro-2-methylpropionylamino)-N,N-dimethylbenzamide
(6-9) picobenzamid
(6-10) oxamid
(6-11) 3,4-dichloro-N-(2-cyanophenyl)isothiazole-5-carboxamide
(6-12) carboxin
(6-13) tiadinil
(6-14) pentiopyrad
(6-15) silthiofum
(6-16) N-[2-(1,3-dimethylbutyl)phenyl]-1-methyl-4-(trifluoromethyl)-1H-pyrole-3-carboxamide

Particular preference is given to active compound combinations E in which the carboxamide of the formula (V) (group 6) is selected from the list below:

(6-2) boscalid
(6-5) ethaboxam
(6-6) fenhexamid
(6-7) carpropanid
(6-8) 2-chloro-4-(2-fluoro-2-methylpropionylamino)-N,N-dimethylbenzamide
(6-9) picobenzamid
(6-10) oxamid
(6-11) 3,4-dichloro-N-(2-cyanophenyl)isothiazole-5-carboxamide
(6-14) pentiopyrad
(6-16) N-[2-(1,3-dimethylbutyl)phenyl]-1-methyl-4-(trifluoromethyl)-1H-pyrole-3-carboxamide

Very particular preference is given to active compound combinations E in which the carboxamide of

In addition to an active compound of the formula (I), the active compound combinations according to the invention comprise at least one active compound from the compounds of groups (2) to (23). In addition, they may also comprise further fungicidally active additives.

If the active compounds in the active compound combinations according to the invention are present in certain weight ratios, the synergistic effect is particularly pronounced. However, the weight ratios of the active compounds in the active compound combinations can be varied within a relatively wide range. In general, the combinations according to the invention comprise active compounds of the
formula (I) and a mixing partner from one of the groups (2) to (23) in the mixing ratios listed in an exemplary manner in Table 21 below.

The mixing ratios are based on ratios by weight. The ratio is to be understood as active compound of the formula (I): mixing partner.

</table>

In each case, the mixing ratio is to be chosen such that a synergistic mixture is obtained. The mixing ratios between the compound of the formula (I) and a compound of one of the groups (2) to (23) may also vary between the individual compounds of a group.

The active compound combinations according to the invention have very good fungicidal properties and are suitable for controlling phytopathogenic fungi, such as Plasmodiophoromycetes, Oomycetes, Chytridiomycetes, Zygomyces, Ascomycetes, Basidiomycetes, Deuteromycetes, etc.

The active compound combinations according to the invention are particularly suitable for controlling Erysiphe graminis, Pyrenophora teres and Leptosphaeria nodorum.
Some pathogens causing fungal diseases which come under the generic names listed above may be mentioned by way of example, but not by way of limitation:

Pythium species, such as, for example, *Pythium ultimum*; Phytophthora species, such as, for example, *Phytophthora infestans*; Pseudoperonospora species, such as, for example, *Pseudoperonospora humuli* or *Pseudoperonospora cubensis*; Plasmopara species, such as, for example, *Plasmopara viticola*; Bremia species, such as, for example, *Bremia lactucae*; Peronospora species, such as, for example, *Peronospora pisi* or *P. brassicae*; Erysiphe species, such as, for example, *Erysiphe graminis*; Sphaerotheca species, such as, for example, *Sphaerotheca fuliginea*; Podosphaera species, such as, for example, *Podosphaera leucotricha*; Venturia species, such as, for example, *Venturia inaequalis*; Pyrenophora species, such as, for example, *Pyrenophora teres* or *P. graminea* (conidia form: Drechslera, syn: Helminthosporium); Cochliobolus species, such as, for example, *Cochliobolus sativus* (conidia form: Drechslera, syn: Helminthosporium); Uromyces species, such as, for example, *Uromyces appendiculatus*; Puccinia species, such as, for example, *Puccinia recondita*; Sclerotinia species, such as, for example, *Sclerotinia sclerotiorum*; Tilletia species, such as, for example, *Tilletia caries*; Ustilago species, such as, for example, *Ustilago nuda* or *Ustilago avenae*; Pelticularia species, such as, for example, *Pelticularia satzakii*; Pyricularia species, such as, for example, *Pyricularia oryzae*; Fusarium species, such as, for example, *Fusarium culmorum*; Botrytis species, such as, for example, *Botrytis cinerea*; Septoria species, such as, for example, *Septoria nodorum*; Leptosphaeria species, such as, for example, *Leptosphaeria nodorum*; Cercospora species, such as, for example, *Cercospora canecens*; Alternaria species, such as, for example, *Alternaria brassicaceae*; Pseudocercosporella species, such as, for example, *Pseudocercosporella herpotrichoides*, Rhizoctonia species, such as, for example, *Rhizoctonia solani*.

The fact that the active compound combinations are well tolerated by plants at the concentrations required for controlling plant diseases permits a treatment of entire plants (above-ground parts of plants and roots), of propagation stock and seed, and of the soil. The active compound combinations according to the invention can be used for foliar application or else as seed dressings.

The active compound combinations according to the invention are also suitable for increasing the yield of crops. In addition, they show reduced toxicity and are well tolerated by plants.

According to the invention, it is possible to treat all plants and parts of plants. Plants are to be understood here as meaning all plants and plant populations, such as desired and undesired wild plants or crop plants (including naturally occurring crop plants). Crop plants can be plants which can be obtained by conventional breeding and optimization methods or by biotechnological and genetic
engineering methods or combinations of these methods, including the transgenic plants and including plant cultivars which can or cannot be protected by plant breeders' certificates. Parts of plants are to be understood as meaning all above-ground and below-ground parts and organs of plants, such as shoot, leaf, flower and root, examples which may be mentioned being leaves, needles, stems, trunks, flowers, fruit bodies, fruits and seeds and also roots, tubers and rhizomes. Parts of plants also include harvested material and vegetative and generative propagation material, for example seedlings, tubers, rhizomes, cuttings and seeds.

The treatment of the plants and parts of plants according to the invention with the active compounds is carried out directly or by action on their environment, habitat or storage area according to customary treatment methods, for example by dipping, spraying, evaporating, atomizing, broadcasting, brushing-on and, in the case of propagation material, in particular in the case of seeds, furthermore by one- or multilayer coating.

As already mentioned above, it is possible to treat all plants and their parts according to the invention. In a preferred embodiment, wild plant species and plant cultivars, or those obtained by conventional biological breeding, such as crossing or protoplast fusion, and parts thereof, are treated. In a further preferred embodiment, transgenic plants and plant cultivars obtained by genetic engineering, if appropriate in combination with conventional methods (genetically modified organisms), and parts thereof, are treated. The term "parts" or "parts of plants" or "plant parts" has been explained above.

Particularly preferably, plants of the plant cultivars which are in each case commercially available or in use are treated according to the invention.

Depending on the plant species or plant cultivars, their location and growth conditions (soils, climate, vegetation period, diet), the treatment according to the invention may also result in superadditive ("synergistic") effects. Thus, for example, reduced application rates and/or a widening of the activity spectrum and/or an increase in the activity of the substances and compositions which can be used according to the invention, better plant growth, increased tolerance to high or low temperatures, increased tolerance to drought or to water or soil salt content, increased flowering performance, easier harvesting, accelerated maturation, higher harvest yields, better quality and/or a higher nutritional value of the harvested products, better storage stability and/or processability of the harvested products are possible which exceed the effects which were actually to be expected.

The transgenic plants or plant cultivars (i.e. those obtained by genetic engineering) which are preferably to be treated according to the invention include all plants which, in the genetic
modification, received genetic material which imparted particularly advantageous useful properties ("traits") to these plants. Examples of such properties are better plant growth, increased tolerance to high or low temperatures, increased tolerance to drought or to water or soil salt content, increased flowering performance, easier harvesting, accelerated maturation, higher harvest yields, better quality and/or a higher nutritional value of the harvested products, better storage stability and/or processability of the harvested products. Further and particularly emphasized examples of such properties are a better defence of the plants against animal and microbial pests, such as against insects, mites, phytopathogenic fungi, bacteria and/or viruses, and also increased tolerance of the plants to certain herbicidally active compounds. Examples of transgenic plants which may be mentioned are the important crop plants, such as cereals (wheat, rice), maize, soya beans, potatoes, cotton, oilseed rape and also fruit plants (with the fruits apples, pears, citrus fruits and grapes), and particular emphasis is given to maize, soya beans, potatoes, cotton and oilseed rape. Traits that are emphasized in particular are increased defence of the plants against insects, by toxins formed in the plants, in particular those formed in the plants by the genetic material from Bacillus thuringiensis (for example by the genes CryIA(a), CryIA(b), CryIA(c), CryIIA, CryIIB2, Cry9c, Cry2Ab, Cry3Bb and Cry1F and also combinations thereof) (hereinbelow referred to as "Bt plants"). Traits that are furthermore particularly emphasized are the increased tolerance of the plants to certain herbicidally active compounds, for example imidazolinones, sulphonylureas, glufosinates or phosphinotoricin (for example the "PAT" gene). The genes which impart the desired traits in question can also be present in combinations with one another in the transgenic plants. Examples of "Bt plants" which may be mentioned are maize varieties, cotton varieties, soya bean varieties and potato varieties which are sold under the trade names YIELD GARD® (for example maize, cotton, soya bean), KnockOut® (for example maize), StarLink® (for example maize), Bollgard® (cotton), Nucotol® (cotton) and NewLeaf® (potato). Examples of herbicide-tolerant plants which may be mentioned are maize varieties, cotton varieties and soya bean varieties which are sold under the trade names Roundup Ready® (tolerance to glufosinates, for example maize, cotton, soya bean), Liberty Link® (tolerance to phosphinotoricin, for example oilseed rape), IMI® (tolerance to imidazolinones) and STS® (tolerance to sulphonylureas, for example maize). Herbicide-resistant plants (plants bred in a conventional manner for herbicide tolerance) which may be mentioned also include the varieties sold under the name Clearfield® (for example maize). Of course, these statements also apply to plant cultivars which have these genetic traits or genetic traits still to be developed, and which will be developed and/or marketed in the future.

Depending on their particular physical and/or chemical properties, the active compound combinations according to the invention can be converted into the customary formulations, such as solutions, emulsions, suspensions, powders, dusts, foams, pastes, soluble powders, granules, aerosols,
suspoemulsion concentrates, natural and synthetic substances impregnated with active compound and microencapsulations in polymeric substances and in coating compositions for seeds, and ULV cool and warm fogging formulations.

These formulations are produced in a known manner, for example by mixing the active compounds or active compound combinations with extenders, that is liquid solvents, liquefied gases under pressure, and/or solid carriers, optionally with the use of surfactants, that is emulsifiers and/or dispersants, and/or foam formers.

If the extender used is water, it is also possible to employ, for example, organic solvents as auxiliary solvents. Essentially, suitable liquid solvents are: aromatics such as xylene, toluene or alkylanes, chlorinated aromatics or chlorinated aliphatic hydrocarbons such as chlorobenzenes, chloroethylenes or methylene chloride, aliphatic hydrocarbons such as cyclohexane or paraffins, for example petroleum fractions, mineral and vegetable oils, alcohols such as butanol or glycol and their ethers and esters, ketones such as acetone, methyl ethyl ketone, methyl isobutyl ketone or cyclohexanone, strongly polar solvents such as dimethylformamide and dimethyl sulfoxide, or else water.

Liquefied gaseous extenders or carriers are to be understood as meaning liquids which are gaseous at standard temperature and under atmospheric pressure, for example aerosol propellants such as butane, propane, nitrogen and carbon dioxide.

Suitable solid carriers are: for example ammonium salts, ground natural minerals such as kaolins, clays, talc, chalk, quartz, attapulgite, montmorillonite or diatomaceous earth, and ground synthetic minerals such as finely divided silica, alumina and silicates. Suitable solid carriers for granules are: for example crushed and fractionated natural rocks such as calcite, marble, pumice, sepiolite and dolomite, or else synthetic granules of inorganic and organic meals, and granules of organic material such as sawdust, coconut shells, maize cobs and tobacco stalks. Suitable emulsifiers and/or foam formers are: for example nonionic and anionic emulsifiers, such as polyoxyethylene fatty acid esters, polyoxyethylene fatty alcohol ethers, for example alkylaryl polyglycol ethers, alkylsulphonates, alkyl sulphates, arylsulphonates, or else protein hydrolysates. Suitable dispersants are: for example lignosulphite waste liquors and methylcellulose.

Tackifiers such as carboxymethylcellulose, natural and synthetic polymers in the form of powders, granules or lattices, such as gum arabic, polyvinyl alcohol and polyvinyl acetate, or else natural phospholipids such as cephalins and lecithins and synthetic phospholipids can be used in the formulations. Other possible additives are mineral and vegetable oils.
It is possible to use colorants such as inorganic pigments, for example iron oxide, titanium oxide and Prussian Blue, and organic dyestuffs such as alizarin dyestuffs, azo dyestuffs and metal phthalocyanine dyestuffs, and trace nutrients such as salts of iron, manganese, boron, copper, cobalt, molybdenum and zinc.

The active compound content of the use forms prepared from the commercial formulations may be varied within wide ranges. The concentration of active compound of the use forms for controlling animal pests, such as insects and acarids, may be from 0.0000001 to 95% by weight of active compound and is preferably from 0.001 to 1% by weight. Application is in a customary manner adapted to the use forms.

The formulations for controlling unwanted phytopathogenic fungi generally comprise between 0.1 and 95% by weight of active compounds, preferably between 0.5 and 90%.

The active compound combinations according to the invention can be used as such, in the form of their formulations or as the use forms prepared therefrom, such as ready-to-use solutions, emulsifiable concentrates, emulsions, suspensions, wettable powders, soluble powders, dusts and granules. They are used in a customary manner, for example by watering (drenching), drip irrigation, spraying, atomizing, broadcasting, dusting, foaming, spreading-on, and as a powder for dry seed treatment, a solution for seed treatment, a water-soluble powder for seed treatment, a water-soluble powder for slurry treatment, or by encrusting.

The active compound combinations according to the invention can, in commercial formulations and in the use forms prepared from these formulations, be present as a mixture with other active compounds, such as insecticides, attractants, sterilants, bactericides, acaricides, nematocides, fungicides, growth regulators or herbicides.

When using the active compound combinations according to the invention, the application rates can be varied within a relatively wide range, depending on the kind of application. In the treatment of parts of plants, the application rates of active compound combinations are generally between 0.1 and 10 000 g/ha, preferably between 10 and 1000 g/ha. In the treatment of seeds, the application rates of active compound combination are generally between 0.001 and 50 g per kilogram of seed, preferably between 0.01 and 10 g per kilogram of seed. In the treatment of the soil, the application rates of active compound combination are generally between 0.1 and 10 000 g/ha, preferably between 1 and 5000 g/ha.

The active compound combinations can be used as such, in the form of concentrates or in the form of...
generally customary formulations, such as powders, granules, solutions, suspensions, emulsions or pastes. The formulations mentioned can be prepared in a manner known per se, for example by mixing the active compounds with at least one solvent or diluent, emulsifier, dispersant and/or binder or fixative, water repellent, if desired desiccants and UV stabilizers, and, if desired, colorants and pigments and other processing auxiliaries.

The good fungicidal action of the active compound combinations according to the invention is demonstrated by the examples below. While the individual active compounds show weaknesses in their fungicidal action, the combinations show an action which exceeds a simple sum of actions.

A synergistic effect in fungicides is always present when the fungicidal action of the active compound combinations exceeds the total of the action of the active compounds when applied individually.

The expected fungicidal action for a given combination of two active compounds can be calculated as follows, according to S.R. Colby ("Calculating Synergistic and Antagonistic Responses of Herbicide Combinations", Weeds 1967, 15, 20-22):

If

X is the efficacy when employing active compound A at an application rate of \( m \) g/ha,

Y is the efficacy when employing active compound B at an application rate of \( n \) g/ha and

E is the efficacy when employing active compounds A and B at application rates of \( m \) and \( n \) g/ha,

then \[ E = X + Y - \frac{X \times Y}{100} \]

Here, the efficacy is determined in %. 0% means an efficacy which corresponds to that of the control, whereas an efficacy of 100% means that no infection is observed.

If the actual fungicidal action exceeds the calculated value, the action of the combination is superadditive, i.e. a synergistic effect is present. In this case, the actually observed efficacy must exceed the value calculated using the above formula for the expected efficacy (E).

The invention is illustrated by the examples below. However, the invention is not limited to the examples.
Use examples

In the use examples shown below, in each case mixtures of the carboxamides of the general formula (I) (group 1) below with the mixing partners given in each case (structural formulae see above) were tested.

Carboxamides of the formula (I) used:

- **(1-1)**
  - ![Formula Image]

- **(1-7)**
  - ![Formula Image]
Example A

Pyrenophora teres test (barley) / curative

Solvent: 50 parts by weight of N,N-dimethylacetamide
Emulsifier: 1 part by weight of alkylaryl polyglycol ether

To produce a suitable preparation of active compound, 1 part by weight of active compound or active compound combination is mixed with the stated amounts of solvent and emulsifier, and the concentrate is diluted with water to the desired concentration.

To test for curative activity, young plants are sprayed with a conidia suspension of Pyrenophora teres. The plants remain in an incubation cabinet at 20°C and 100% relative atmospheric humidity for 48 hours. The plants are then sprayed with the preparation of active compound at the stated application rate.

The plants are placed in a greenhouse at a temperature of about 20°C and a relative atmospheric humidity of about 80%.

Evaluation is carried out 12 days after the inoculation. 0% means an efficacy which corresponds to that of the control, whereas an efficacy of 100% means that no infection is observed.

The table below clearly shows that the activity found for the active compound combination according to the invention is higher than the calculated activity, i.e. that a synergistic effect is present.

Example B

Erysiphe test (barley) / protective

Solvent: 50 parts by weight of N,N-dimethylacetamide
Emulsifier: 1 part by weight of alkylaryl polyglycol ether

To produce a suitable preparation of active compound, 1 part by weight of active compound or active compound combination is mixed with the stated amounts of solvent and emulsifier, and the concentrate is diluted with water to the desired concentration.

To test for protective activity, young plants are sprayed with the preparation of active compound at the stated application rate. After the spray coating has dried on, the plants are dusted with spores of Erysiphe graminis f.sp. hordeti.

Plants are placed in a greenhouse at a temperature of about 20°C and a relative atmospheric humidity of about 80% to promote the development of mildew pustules.

Evaluation is carried out 6 days after the inoculation. 0% means an efficacy which corresponds to that of the control, whereas an efficacy of 100% means that no infection is observed.

The table below clearly shows that the activity found for the active compound combination according to the invention is higher than the calculated activity, i.e. that a synergistic effect is present.

Example C

Puccinia test (wheat) / curative

Solvent: 50 parts by weight of N,N-dimethylacetamide
Emulsifier: 1 part by weight of alkylaryl polyglycol ether

To produce a suitable preparation of active compound, 1 part by weight of active compound is mixed with the stated amounts of solvent and emulsifier, and the concentrate is diluted with water to the desired concentration.

To test for curative activity, young plants are sprayed with a conidia suspension of *Puccinia recondita*. The plants remain in an incubation cabinet at 20°C and 100% relative atmospheric humidity for 48 hours.

The plants are then sprayed with the preparation of active compound at the stated application rate.

The plants are placed in a greenhouse at a temperature of about 20°C and a relative atmospheric humidity of about 80% to promote the development of rust pustules.

Evaluation is carried out 8 days after the inoculation. 0% means an efficacy which corresponds to that of the control, whereas an efficacy of 100% means that no infection is observed.

The table below clearly shows that the activity found for the active compound combination according to the invention is higher than the calculated activity, i.e. that a synergistic effect is present.

Example H

Botrytis cinerea test (bean) / protective

Solvents: 24.5 parts by weight of acetone
5 parts by weight of dimethylacetamide

Emulsifier: 1 part by weight of alkylaryl polyglycol ether

To produce a suitable preparation of active compound, 1 part by weight of active compound is mixed
with the stated amounts of solvents and emulsifier, and the concentrate is diluted with water to the
desired concentration.

To test for protective activity, young plants are sprayed with the preparation of active compound at
the stated application rate. After the spray coating has dried on, 2 small pieces of agar colonized by
Botrytis cinerea are placed onto each leaf. The inoculated plants are placed in a darkened chamber at
about 20°C and 100% relative atmospheric humidity.

The size of the infected areas on the leaves is evaluated 2 days after the inoculation. 0% means an
efficacy which corresponds to that of the control, whereas an efficacy of 100% means that no
infection is observed.

The table below clearly shows that the activity found for the active compound combination according
to the invention is higher than the calculated activity, i.e. that a synergistic effect is present.

Example I

*Alternaria mali test (in vitro) / microtitre plates*

The microtest is carried out in microtitre plates using potato dextrose broth (PDB) as liquid test medium. The active compounds are used as technical grade a.i., dissolved in acetone.

For inoculation, a spore suspension of *Alternaria mali* is used. After 5 days of incubation in the dark and with shaking (10 Hz), for each filled cavity of the microtitre plates, the light transmittance is determined with the aid of a spectrophotometer.

0% means an efficacy which corresponds to the growth in the controls, whereas an efficacy of 100% means that no fungal growth is observed.

The table below clearly shows that the activity found for the active compound combination according to the invention is higher than the calculated activity, i.e. that a synergistic effect is present.

Example J

Rhizoctonia solani test (in vitro) / microtitre plates

5 The microtest is carried out in microtitre plates using potato dextrose broth (PDB) as liquid test medium. The active compounds are used as technical grade a.i., dissolved in acetone.

For inoculation, a mycelium suspension of Rhizoctonia solani is used. After 5 days of incubation in the dark and with shaking (10 Hz), for each filled cavity of the microtitre plates, the light transmittance is determined with the aid of a spectrophotometer.

0% means an efficacy which corresponds to the growth in the controls, whereas an efficacy of 100% means that no fungal growth is observed.

* found = activity found
** calc. = activity calculated using Colby's formula
Example L

*Sphaerotheca fuliginea test (gherkin) / protective*

To produce a suitable preparation of active compound, the substance to be tested is homogenized in a mixture of acetone/Tween/water. The suspension is then diluted with water to the desired concentration.

Gherkin plants (Vert petit de Paris cultivar) are sown in starter cups on 50/50 peat soil/pozzolana soil substrate and cultivated at 20°C/23°C. At the 2-leaf stage, the plants are sprayed with the preparation of active compound at the stated application rate.

To test for protective activity, the plants are, after 24 h, sprayed with an aqueous spore suspension of *Sphaerotheca fuliginea* (100 000 spores/ml). The plants then remain at 20°C/25°C and 60/70% relative atmospheric humidity.

Evaluation is carried out 21 days after the inoculation. 0% means an efficacy which corresponds to that of the control, whereas an efficacy of 100% means that no infection is observed.

The table below shows clearly that the activity found for the active compound combination according to the invention is higher than the calculated activity, i.e. that a synergistic effect is present.

CLAIMS:

1. A synergistic fungicidal compound combination comprising:

\[ N-(3',4'-dichloro-5-fluoro-1,1'-biphenyl-2-yl)-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide; \] and

5 at least one compound selected from the group consisting of:

azoxystrobin,

fluoxastrobin,

\((2E)-2-(2-\{6-(3-chloro-2-methylphenoxy)-5-fluoro-4-pyrimidinyl\}oxy)phenyl)-2-(methoxyimino)-N-methylethanamide,\]

10 trifloxystrobin,

\((2E)-2-(methoxyimino)-N-methyl-2-(2-\{((1E)-1-[3-(trifluoromethyl)-phenyl]ethyliden}amino)oxy)methyl\}phenylethanamide,\]

\((2E)-2-(methoxyimino)-N-methyl-2-\{2-[(1E)-(1-[3-(trifluoromethyl)phenyl]-ethoxy)imino)methyl\}phenylethanamide,\]

15 orysastrobin,

5-methoxy-2-methyl-4-(2-\{((1E)-1-[3-(trifluoromethyl)phenyl]ethyliden}amino)oxy)methyl\}phenyl)-2,4-dihydro-3H-1,2,4-triazol-3-one,

kresoxim-methyl,

dimoxystrobin,

20 picoxystrobin,

paraclostrobin, and

metominostrobin.
2. The combination according to claim 1, comprising at least one compound selected from the group consisting of:

- azoxystrobin,
- fluoxastrobin,
- trifloxystrobin,
- kresoxim-methyl,
- picoxystrobin, and
- pyraclostrobin.

3. Use of the combination according to claim 1 or 2, for controlling unwanted phytopathogenic fungi.

4. A method for controlling unwanted phytopathogenic fungi, comprising applying the combination according to claim 1 or 2, to the unwanted phytopathogenic fungi and/or their habitat.

5. A process for preparing a fungicidal composition, comprising mixing the combination according to claim 1 or 2, with an extender, a surfactant or a mixture thereof.
