(54) Title: OPERATION MODES FOR A PERSONAL VIDEO RECORDER USING DYNAMICALLY GENERATED TIME STAMPS

(57) Abstract: A Personal Video Recorder (PVR) generates an object index table in real-time that can be updated while streaming media is being encoded and stored in memory. This allows more dynamic video trick mode operations such as fast forward, reverse and skip. The PVR also provides automatic data rate control that prevents video frames from being dropped thus preventing jitter in the output media.
