(54) **Connector plug**

(57) The invention concerns a connector plug comprising a first connector plug shell (1), a second connector plug shell (2) for fitting on the first connector plug (1) and a locking device (3) for the securing of the second connector plug shell on the connector plug shell (1), where the locking device (3) can only be fixed in a first-locked position or end-locked position. The connector plug has a securing device (6), which with the released

plug connector holds the locking device (3) in the front-locked position where with complete insertion of the second connector plug shell (2) a pressure element (5) which is formed onto the connector plug floor (21), actuates the securing device (6). The securing device (6) which, when it is in the first-locked position (11), prevents the introduction of the locking device (3), releases the latter so that the locking device (3) can be locked into the end-locked position.
