(54) Title: EMBEDDED NAVIGATION INTERFACE

(57) Abstract: A navigation interface is embedded in imagery and includes various controls for manipulating the imagery. The controls provide various navigation operations, including but not limited to: rotation, tilt, zoom and 360 degree. In some implementations, one or more controls can be operated to restore the imagery to a predetermined state. Some implementations include a control for providing 360 degree movement of imagery. One or more controls can provide incremental and continuous motion of imagery. The navigation interface can fade out or otherwise be obfuscated when the user is not interacting with the navigation controls. A compass or other graphic can replace the navigation interface when it is no longer displayed.

* Special categories of cited documents :

- *A* document defining the general state of the art which is not considered to be of particular relevance
- *E* earlier document but published on or after the international filing date
- *L* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- *O* document referring to an oral disclosure, use, exhibition or other means
- *P* document published prior to the international filing date but later than the priority date claimed

- *T* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- *X* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- *Y* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
