UNITED STATES PATENT OFFICE.

JONAS HERRMANN, OF COLUMBUS, OHIO.

BRACKET.

SPECIFICATION forming part of Letters Patent No. 292,011, dated January 15, 1884.

Application filed July 26, 1883. (Model.)

To all whom it may concern:

Be it known that I, JONAS HERRMANN, of Columbus, in the county of Franklin and State of Ohio, have invented a new and Improved
5 Bracket, of which the following is a full, clear, and exact description.

The object of this invention is to provide a novel bracket adapted for holding a cross-bar out from the wall.

10 Reference is to be had to the accompanying drawings, forming a part of this specification, in which similar letters of reference indicate corresponding parts in both the figures.

Figure 1 is a front elevation of my new and
15 improved bracket, showing the cross-bar in place; and Fig. 2 is a side elevation of the bracket with the cross-bar removed.

A represents the supporting-board of the bracket. This is adapted to be secured to the
20 wall or other permanent object by screws, bolts, or nails passing through the holes *a a*, and has the bracket-arm B formed upon or secured at right angles to it.

To the outer end of the bracket-arm B is
25 hinged, by the hinge-plates *bb* and screws *b' b'*,

the leaf C, which is recessed, as shown at *c*, to leave a space between the leaf and the outer end of the arm B, for the passage of the cross-bar D or one end thereof.

The cross-piece D may be held by a single
30 bracket, to increase the hanging or holding capacity of the bracket as a whole; or two brackets may be used for holding the cross-piece D, one being placed at or near each end of the piece D. In this manner the cross-piece D is
35 very securely held, and it may be very easily removed, which renders the bracket very convenient for many purposes.

Having thus described my invention, I claim as new and desire to secure by Letters Patent— 40

The combination of the board A, the bracket-arm B, secured at right angles thereto, the hinged plates *b b* at the outer end of said arm, the screws *b' b'*, the leaf C, recessed at *c*, and the cross-bar D, all arranged substantially as
45 shown and described.

JONAS HERRMANN.
