(54) **Control device for solution of tasks**

(57) The invention relates to an arrangement for areas (1) in which means for actuation by persons (2) in a certain way in order to solve a number of problems (E).

A control device (3) incorporated in the aforementioned means for achieving automatic control of the solution of the problems comprises at least one of the following automatically acting control devices:

inductive sensor (4),
capacitive sensor,
magnetic contact,
light relay,
movement detector, and
photocell.

The aforementioned control device (3) is connected to an indicator lamp and a lock for a door in the aforementioned area (1) thereby permitting correct or incorrect to be indicated automatically and the door lock to be unlocked once the right solution has been achieved.
