(54) Title of the Invention: **Atopy cure baby dry milk with green tea and lactobacillus**
Abstract Title: **Atopy cure baby dry milk with green tea and lactobacillus**

(57) Atopy has been known as one of the incurable diseases without a sure preventive or treatment method for both babies and adults. This invention is the first that enables the prevention and treatment of baby atopy using green tea and lactobacillus digestives. According to the invention, by addition of 0.02 ~ 1.3 wt % of green tea, and for the purpose of preventing side effects from green tea and increasing curative efficacy, addition of 0.15 ~ 10 wt % (0.009 ~ 0.8wt % on pure lactobacillus basis) of lactobacillus digestives made up of lactobacillus or butyric-acid bacteria or yeast fungi to baby dry milk or weaning food, we can prevent and treat baby atopy. 0.1 ~ 1.3 wt % of green tea content is adequate for the cure of babies' atopy and 0.02 ~ 0.1 wt % of green tea content is adequate for the prevention and aftercare of baby atopy. Green tea or green tea extract and lactobacillus digestives are added during manufacturing process of the baby dry milk or weaning food. As a result of the experiment the invention was applied to, most of the babies who participated in the experiment either were completely cured of atopy or showed significant improvement within about a month.
