UNITED STATES PATENT OFFICE.

CLARENCE I. DAILEY, OF JEFFERSONVILLE, INDIANA.

NOVELTY TOY.

Application filed July 3, 1922. Serial No. 572,566.

To all whom it may concern:

Be it known that I, CLARENCE I. DAILEY, a citizen of the United States, residing at Jeffersonville, in the county of Clark and State of Indiana, have invented certain new and useful Improvements in a Novelty Toy, of which the following is a specification.

My invention relates to improvements in toys.

An object of the invention is to provide a toy which may be used in conjunction with the ordinary flash light.

A further object of my invention is to provide a hollow illuminated toy having a screw threaded sleeve by which the toy may be mounted on a flash light.

A still further object of my invention is to provide a toy which is strong, durable, simple and inexpensive in construction.

Other objects and advantages of the invention will become apparent during the course of the following description.

In the accompanying drawings forming a part of the specification and in which like numerals are employed to designate like parts throughout the same.

Figure 1 is a perspective view of my invention,

Figure 2 is a longitudinal section through the same, and

Figure 3 is a section on line 3—3 of Fig. 2.

In the drawings, wherein for the purpose of illustration is shown the preferred embodiment of my invention, the numeral 5 represents a hollow body in the shape of an Easter egg provided with a screw threaded sleeve which is adapted to be mounted on an ordinary flash light.

One end of the hollow body is provided with a bead 8 adapted to receive a transparent window 9. The other end of the hollow body 3 is provided with an inwardly extending sleeve 10. Mounted within the sleeve 10 is a shaft 11 having a handle 12 at one end, and a disk 13 on the opposite end. As is shown in Fig. 3, of the drawings the disk is provided with a series of representations of figures in different positions and when the handle 12 is turned the figures will give the appearance of going through different motions.

If it is so desired the body 3 may be mounted on an ordinary wooden handle instead of a flash light as is shown in the drawing. Furthermore, the hollow body 3, instead of being in the shape of an Easter egg may be a representation of a rabbit or the like and when mounted on a flash light the rays of light will shine through the eyes.

In use, the hollow body 3 is mounted by means of the screw threads 6 on an ordinary flash light 7. By looking through the window 9 and turning the handle 12 a miniature moving picture will be seen. It has been found that by first turning the handle 12 in one direction and then in the opposite direction, a child will be greatly amused by the result.

It is to be understood that the form of my invention herewith shown and described is to be taken as a preferred embodiment of the same, and that various changes in the shape, size and arrangement of parts may be resorted to without departing from the spirit of the invention or the scope of the subjoined claims.

Having thus described my invention, I claim:—

1. The combination with a flash light, of a hollow body mounted on the illuminated end of said flash light, a window mounted in one end of said hollow body, a rotatable disk mounted in the opposite end thereof, means operable from the exterior of said hollow body to rotate said rotatable disk, the end of said flash light being adapted to be interposed between the window in one end and the rotatable disk in the opposite end.

2. The combination with a flash light, a hollow body mounted on the illuminated end of the flash light so as to illuminate the interior of the hollow body, a window mounted in one end of said hollow body on one side of its illuminated end, and a rotatable disk mounted in the opposite end of the hollow body on the other side of the illuminating end of the flash light.

In testimony whereof I affix my signature in presence of two witnesses.

CLARENCE I. DAILEY.
