(54) Title: GOGGLE WITH REMOVABLE FOAM LINING

(57) Abstract: Provided is a goggle comprising a face shield attached to a first subframe and a foam assembly having a foam element and second subframe. The foam assembly is removably attachable to the first subframe such that variously configured foam assemblies are interchangeable with the first subframe and face shield. More particularly, the foam element may define a proximal surface that is sized and configured to fit a wide face, a narrow face, a short face, a long face and/or various combinations thereof. Also, the foam assembly may be sized and configured to be compatible with different helmets. A plurality of these variously configured foam assemblies may be provided with a single first subframe and face shield such that a wearer may select a desired face shield and an appropriate foam assembly in order to accommodate the wearer's uniquely shaped face and/or helmet.
