Title: PEEK-A-BOO DOLL WITH DUAL ACTIVATION

Abstract: The invention provides a toy that wakes when activated. The toy may be activated by simulating play with the toy or by changing the illumination of the toy's environment. Through electronic circuitry, the toy produces a sound output when its magnetic sensor detects a magnet nearby or when its photosensor detects a change in the level of illumination in the surrounding area. The toy may be used for peek-a-boo play involving children.

* Special categories of cited documents

*A* document defining the general state of the art which is not considered to be of particular relevance

*E* earlier application or patent but published on or after the international filing date

*L* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

*O* document referring to an oral disclosure, use, exhibition or other means

*P* document published prior to the international filing date but later than the priority date claimed
