B. B. WALKER
COMBINED CANE AND GUN
Filed Feb. 1, 1926

Inventor
BERRY B. WALKER.

A. L. Jackson
Attorney

UNITED STATES PATENT OFFICE.

BERRY B. WALKER, OF MINERAL WELLS, TEXAS.

COMBINED CANE AND GUN.

Application filed February 1, 1926. Serial No. 85,299.

My invention relates to a combined gun and walking cane and particularly to an attachment for a gun by which a gun can be used for a walking cane; and the object is to provide a simple attachment by which a gun can be readily converted into a walking cane and which can be readily removed so that the gun can be used when necessary and which will serve as a carrier for a gun wiper and which can be used to carry medicine or other liquid. Other objects and advantages will be fully explained in the following description and the invention will be more particularly pointed out in the claims.

Reference is had to the accompanying drawings which form a part of this application.

Similar characters of reference are used to indicate the same parts throughout the several views.

Fig. 1 is a side elevation of a gun provided with the attachment.

Fig. 2 is a longitudinal section of the attachment, showing one form of the attachment which varies from the form shown in Fig. 1.

Fig. 3 is a longitudinal section of another form of the attachment.

The drawings show a gun 1 of ordinary type provided with the attachment. The attachment consists of a longitudinal tubular extension or chamber 2 which may be closed at the end by a plug 3 which is provided with a rubber tip 4. The attachment is provided with a spring coupling 5 which is bifurcated at the end which is to be inserted in the gun barrel 1. The ends of the coupling members 6 are tapered or wedge-shaped so that the tips may be inserted in the mouth of the gun barrel and which will yield towards each other to permit the forcing

of the coupling into the gun barrel. The coupling 5 may be secured in the end of the cane member 2 by forcing the same in the end of the tubular member or by screwing the coupling in as shown in Fig. 3.

In Fig. 2 the attachment consists of two members 7 and 8 which are connected by a coupling 9 and the two members 7 and 8 may be closed by plugs 10 of cork or other suitable material.

In Fig. 3 the members 7 and 8 may be connected together by a screw connection and the outer end of the member 7 closed by a plug 11.

What I claim is,—

1. An attachment for guns comprising an extension rod of the same size in cross-section as the gun and a spring coupling rigid with the attachment and sprung into the gun barrel.

2. An attachment for guns comprising an extension hollow rod of the same size in cross-section as the gun, a bearing plug connected with the outer end and closing the hollow end, and a coupling rigid with and closing the other end and having spring members sprung into the gun barrel.

3. An attachment for guns comprising an extension hollow rod consisting of sections, plugs for closing the ends of adjacent sections, a coupling connecting said sections rigidly together, and a spring coupling having one inserted in and made rigid with the section adjacent to the gun and having yielding members sprung into said barrel, said attachment being of the same size in cross-section as the gun barrel.

In testimony whereof, I set my hand, this 19th day of January, 1926.

BERRY B. WALKER.
