W. S. WARD.
WRENCH MEMBER.
(Application filed Jan. 30, 1901.)
UNITED STATES PATENT OFFICE.

WILLIAM S. WARD, OF PLANTSVILLE, CONNECTICUT, ASSIGNOR TO THE H. D. SMITH AND COMPANY, OF SAME PLACE.

DESIGN FOR A WRENCH MEMBER.

SPECIFICATION forming part of Design No. 34,136, dated February 26, 1901.

Application filed January 30, 1901. Serial No. 45,394. Term of patent 14 years.

To all whom it may concern:

Be it known that I, WILLIAM S. WARD, a citizen of the United States, residing at Plantsville, in the county of Hartford and State of Connecticut, have invented and produced a new and original Design for a Wrench Member, of which the following is a specification, reference being had to the accompanying drawings, forming part thereof.

Figure 1 is a side elevation of the bar and handle member of a wrench, showing my new design. Fig. 2 is an edge view of the same, showing the back edge.

As shown in the drawings, the handle-scales of the handle A have the ordinary semi-oval form in cross-section and a nearly semi-circular form at the front end 4, while the rear end begins to narrow on curved lines 5 5 in conformity with the general oval form of the handle in side view and then terminates in a convex end 6, that extends across the general oval form of that end of the handle. The handle-tip 7 projects beyond the adjacent end 6 of the handle-scale, and, as seen in side view, Fig. 1, has substantially a convex outer face and a concave inner face that matches the convex end 6 of the handle-scale. The bolster 8 at the other end of the handle A is concaved on the inner side to correspond with the front curved end 4 of the handle-scale. In edge view, Fig. 2, the inner faces of the tip and bolster and ends of the handle-scales have a slanting form, as shown. The step 9, forward part of the bolster 8, and the wrench-bar B are of an old form and are therefore indicated in broken lines.

Having described my invention, what I claim as new, and desire to secure by Letters Patent, is—

The design for a wrench member, as here- in shown and described.

WILLIAM S. WARD.
