## (54) A silver halide color photographic light-sensitive material for making color negatives.

(57) A silver halide color photographic light-sensitive material for making color negatives is disclosed. The color photo graphic material is comprises a support having thereon a blue-sensitive silver halide emulsion layer, a green-sensitive silver halide emulsion layer and a red-sensitive silver halide emulsion layer, and the green-sensitive emulsion layer is comprised of a single layer containing a DIR compound and a magenta coupler represented by the following Formula 1:

(I)

wherein Z represents a group of nonmetallic atoms necessary to form a nitrogen-containing heterocyclic ring, provided that the ring formed by Z may have a substituent: X is a hydrogen atom or a sustituent capable of being split off upon reaction with the oxidation product of a color developing agent; and R is a hydrogen atom or a substituent. The photographic material is excellent in the image sharpness, processing stability and preservability as well as in the formalin registance.

CATEGORY OF CITED DOCUMENTS

X : particularly relevant if taken alone
Y : particularly relevant if combined with another document of the same category
A : technological background
O : non-written disclosure
P : intermediate document

T : theory or principle underlying the invention
E : earlier patent document, but published on, or after the filing date
D : document cited in the application
L : document cited for other reasons

& : member of the same patent family, corresponding document
