(54) Title: AUTOMATED DATABASE-POPULATION TOOL

FIG. 1

(57) **Abstract:** An Internet-based web application with a database back-end that processes user-entered data to automatically carry out various functions such as updating database tables, communicating with employees, reserving office space, assigning personal identification number, and any number of tasks required to properly manage employees and their information. The application is superior to repetitive manual entry of duplicative data into each employee database that a company manages while efficiently coordinating the various departmental functions required to modify the status and information of new, existing, and departing employees. The application efficiently updates all systems within the company as needed and interacts with users when information is needed from those users at various points in the process.
