Herrick Aiken

Letters Patent.

The Schedule referred to in these Letters Patent and making part of the same, containing a description in the words of the said Herrick Aiken, himself, of his improvement in Clocks and Hair Brushes.

The Bristles or hair is twisted between wires, making a spiral brush, and trimmed to a suitable length. The spiral Brush is then bent into angular shape: and the two ends of the wires are brought together, and put into a handle, and there stand. Or the two ends of the two ends of the wire may be swelled into an iron box, which has a shank, that enters into, and is fastened into the handle. Another method is, by taking 3 or 6 spiral Brushes, placed parallel, at a suitable distance apart. The ends are then swelled into iron boxes, one at each end: one of the boxes has a shank which is fastened into the handle, as before mentioned.

What I claim as my invention is the construction of the above described Brushes for clothes and hair: but I do not claim the principle of twisting hair, or bristles between wires for making Brushes: this having been done before. For a further illustration of my invention, I refer to the model and drawing of the same, deposited in the Patent Office. In testimony that the above is a true specification of my invention, I have subscribed my name, before two witnesses, and made oath to the same, at the City of Washington this 13th day of May, 1830.
