UNITED STATES PATENT OFFICE.

SOPHUS ADOLPH EIERMANN, OF OMAHA, NEBRASKA.

DESIGN FOR A SPRING FOR VEHICLE-WHEELS.

SPECIFICATION forming part of Design No. 27,178, dated June 8, 1897.

Application filed April 5, 1897. Serial No. 630,871. Term of patent 14 years.

To all whom it may concern:

Be it known that I, SOPHUS ADOLPH EIERMANN, a citizen of the United States, residing at Omaha, in the county of Douglas and State of Nebraska, have invented a new and original Design for a Spring for Vehicle-Wheels, of which the following is a specification.

This invention relates to a new and original design for a spring for vehicle-wheels; and it has for its object to provide a design of this character which shall be both useful and ornamental.

The leading feature of the design resides in a narrow flat plate having its opposite terminals lying in parallel planes and bent between such terminals to form an intermediate sigmoidally-curved portion, and segmental portions curved, respectively, from the opposite parallel terminals into said intermediate S or sigmoidally-curved portion.

In the drawings, Figure 1 is a perspective

view of a spring embodying the herein-described design. Fig. 2 is a side view thereof.

Referring to the drawings, the numeral 1 designates a narrow flat plate provided with opposite parallel terminals 2. Between the parallel terminals 2 the plate is bent to form an intermediate sigmoidally-curved portion 3, and segmental portions 4 curve, respectively, from the opposite terminals 2 into the intermediate S or sigmoidally-curved portion 3.

What I claim is—

The design for a spring for vehicle-wheels herein shown and described.

In testimony that I claim the foregoing as my own I have hereto affixed my signature in the presence of two witnesses.

SOPHUS ADOLPH EIERMANN.

Witnesses:

A. H. DOUBLE,
CHRIS BOYER.
