(54) Title: SECURE LOGISTIC SYSTEM

(57) Abstract: The present invention relates to a secure logistic system (102) that includes a digital secure container (102) for carrying one or more objects. The system further includes a handheld device (104a) configured to digitally pair with the digital secure container (102) and implements a digital handcuff on the digital secure container while the digital secure container is transported from a source warehouse to a secure logistic vehicle and from the secure logistic vehicle to a destination warehouse. The system includes a portable device (104b) mountable at the secure logistic vehicle which is configured to receive and transfer the digital handcuff from/to the handheld device and to digitally pair with the digital secure container while the secure logistic vehicle is in-transit between the source warehouse and the destination warehouse. The system also includes a remote monitoring subsystem (108) configured to communicate with the digital secure container, the handheld device, and the portable device and to establish a centralized monitoring of the secure logistic system between the source warehouse and the destination warehouse.
