Samuel Rendall

Letters Patent

The Schedule referred to in these Letters Patent and making part of the same containing a description of the said Samuel Rendall's invention of the improvement in ~~Cast~~ Spelling, Books

Each syllable in a word is distinguished or printed out by two small marks (called or denominated syllabicks) the first below or above the face of the letters and the last between the last letter of one syllable and first letter of the next so that each syllable in a word is readily pronounced by the reader and the words pronounced with the same ease as when the syllables are separated by spaces or hyphens upon the following words

Malignancy - Disposition - Unintelligence - Philosophical - Hieroglyphical - Metamorphosis ---

The accented Syllables are distinguished by double Apostrophes and is one above and one below the right side of the last letter of the accented syllable as Syphens
