(54) **Title:** ACCESSING PRE-RECORDED CONTENT ON A RECORD CARRIER

(57) **Abstract:** A system includes a first manufacturing apparatus (510) for manufacturing a plurality of record carriers, such as DVDs, with a pre-recorded area storing the same content. A second manufacturing apparatus (520) stores an identifier in an identifier area of the record carriers. The identifier is unique for distinct groups of record carriers. Each group is associated with a distinct playlist. The playlists differ in at least a selection of content parts that can be accessed and/or a sequence in which content parts can be accessed. A reading device (530) includes means (532) for receiving a record carrier, means (536) for reading an identifier stored in the identifier area, means (537) for obtaining an associated playlist for the read identifier, and means (538) for providing access for rendering to content parts on the playlist.
