(54) Title: HEAT EXCHANGER

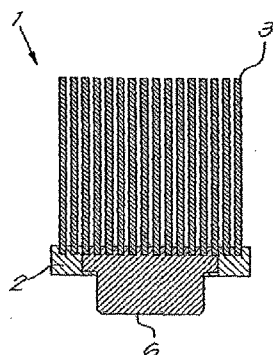

Fig. 2

(57) Abstract: Heat exchanger which is composed of a base plate (2), several cooling fins (3) and accumulator blocks (6), whereby the cooling fins (3) are fixed to the base plate (2) and the accumulator blocks (6) are pressed in the base plate or provided therein, characterised in that the base plate (2) and cooling fins (3) are made of a first metal alloy and in that the accumulator blocks (6) are made of a second metal alloy whereby the second metal alloy provides for a better heat conduction than the first metal alloy.

* Special categories of cited documents :

A document defining the general state of the art which is not considered to be of particular relevance

E earlier document but published on or after the international filing date

L document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

O document referring to an oral disclosure, use, exhibition or other means

P document published prior to the international filing date but later than the priority date claimed

T later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

X document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

Y document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
