ATTORNEY

UNITED STATES PATENT OFFICE.

SOLOMON C. LANGFELD, OF NEW YORK, N. Y., ASSIGNOR, BY MESNE ASSIGNMENTS, TO AUGUST GOERTZ.

PURSE.

SPECIFICATION forming part of Letters Patent No. 484,101, dated October 11, 1892.

Application filed August 27, 1889. Serial No. 322,104. (No model.)

To all whom it may concern:

Be it known that I, SOLOMON C. LANGFELD, of the city, county, and State of New York, have invented certain new and useful Improvements in Purses, of which the following is a specification, reference being had to the accompanying drawings, which form part of the same.

My invention relates to a new article of manufacture; and it consists in a purse to the metal rim of which is attached a bonbonnière or receptacle for candy, tobacco, &c.

My invention is illustrated in the accompanying drawings, in which similar parts in the several views are indicated by similar letters.

Figure 1 represents a front view of my improved purse with the bonbonnière attached; Fig. 2, a sectional view of the same through the line *x x*, Fig. 1; Fig. 3, a plan view of the purse, showing the position when closed and ready to slip into the pocket or carry in the hand.

In the figures, B represents the pocket of a purse furnished at its upper end with a circular rim of metal P, furnished with a latch or clasp S.

At *h*³ is a hinge or similar mechanism, by which a bonbonnière or similar receptacle is attached to the rim. This bonbonnière is furnished with a latch N, adapted to engage with the clasp S in the rim of the purse. When the bonbonnière is latched or fastened to the rim of the purse, the purse is closed. The bonbonnière or receptacle is furnished with a lid C, hinged or otherwise fastened to the body R of the receptacle and catching in closing at *r*.

It is obvious that the purse and its metal rim and the bonbonnière or receptacle may be made in various shapes and sizes to suit

the fancy of the purchaser, and may consist of any metallic substance. The top and body of the metal portion of the purse and bonbonnière may be suitably engraved, oxidized, &c.

The combined purse and bonbonnière furnishes a new and useful article of manufacture and possesses many advantages. Its compactness and utility makes it desirable, and, as either the purse or bonbonnière can be opened separately, it possesses all the advantages to be derived from each article.

The material of which the purse-pocket is to be made and the manner in which the purse-pocket is formed and attached to its rim may be varied to suit the demands of the market, and the size of the purse may be varied, without departing from my invention.

Having fully described my invention, what I desire to claim and obtain by Letters Patent is—

1. A purse or bag having at its mouth a pair of lids hinged to the supporting-frame thereof, the outer lid closing upon the inner one, the inner one forming a chamber or receptacle as well as a cover for the mouth of the purse or bag, and suitable fastening devices for the same.

2. A purse and bonbonnière combined, consisting of a pouch or sack provided with a metallic rim or frame at the upper end or mouth thereof, to which is hinged a bonbonnière provided with a lid and serving as a cover for the mouth of the pouch or sack, and devices for holding the bonbonnière in closed relation to the pouch or sack and the lid in closed relation to said bonbonnière, substantially as set forth.

SOLOMON C. LANGFELD.

In presence of—

HENRY E. EVERDING,
MITCHELL L. ERLANGER.
