(54) Title: DISTRIBUTION OF TRUST DATA

(57) Abstract: Embodiments of the present invention provide methods, systems, software for providing, distributing and/or using trust scores for online entities. In accordance with various embodiments, one or more trust score servers may be configured to provide trust scores, perhaps in response to a request (e.g., from another trust scores server, from a client, from a border device, etc.). In other embodiments, a computer (e.g., a border device, a client, etc.) may maintain a local cache of trust scores. In some cases, a computer may request a trust score for a particular online entity in response to receiving, detecting and/or attempting to transmit a communication with that online entity.
